Whether in a rural or urban setting, the addition of railway infrastructure can transform a train set into a railway layout. Modelling Tunnels, Embankments, Walls and Fences for Model Railways demonstrates how to build these essential features and place them into a railway layout. It describes the unique challenges, techniques and materials for each element, and provides plenty of practical advice on how to realistically model these crucial aspects of a landscape. Topics include: incorporating topographical features into a layout, from planning to execution; the importance of baseboard construction and track laying when modelling a landscape; practical considerations and techniques for building tunnels; the use of vegetation, animals and small buildings to bring layouts to life and finally, the use of ready-to-plant items, and kit- and scratch-building techniques. An essential guide to creating realistic infrastructure that will be of great interest to railway modellers who have progressed to the stage of making their own scenery and geographical features. Superbly illustrated with 330 colour photographs.
