SAP R/3 Reporting and E-business Intelligence Thomas Aidan Curran 2000 "SAP R/3 Reporting" shows how to deliver effective reports for every area of the enterprise. It's the first book to focus specifically on SAP R/3 reporting. Curran begins by introducing SAP R/3's key information systems, data resources, and business processes. Next, he reviews specific reports for financials, logistics, HR, asset management, and shows how to build reports that are readable, accurate, and timely. Finally, Curran introduces ActiveSheets, third-party software that streamlines reporting by working through Microsoft Excel. A working ActiveSheets demo is included on CD-ROM.

SAP EWM and TM for Enterprise Logistics: Architecture, Automation, and Real-World Solutions 2025

Author 1 : RAJENDRA KATTUNGA, Author 2 : DR. RAVI PRAKASH CHATURVEDI PREFACE The digital transformation of supply chains is redefining how enterprises manage logistics, with increasing emphasis

on real-time visibility, automation, and intelligent decision-making. As businesses strive to remain competitive in a globalized economy, logistics operations have become a strategic differentiator rather than a mere cost centre. This book, "SAP EWM and TM for Enterprise Logistics: Architecture, Automation, and Real-World Solutions," serves as a comprehensive guide to navigating the evolving landscape of enterprise logistics through the robust capabilities of SAP's Extended Warehouse Management (EWM) and Transportation Management (TM) systems. The objective of this book is to offer a practical yet in-depth exploration of how SAP EWM and TM can be deployed to build scalable, intelligent, and integrated logistics networks. It is crafted for logistics professionals, SAP consultants, IT architects, and business leaders who aim to modernize their logistics architecture while aligning with industry best practices and regulatory demands. We begin by laying the foundations of enterprise logistics within the SAP ecosystem, contextualizing the role of digital supply chains in today's hyperconnected world. Building on this, we offer a consolidated overview of SAP EWM and TM capabilities and their real-world applicability across industries. A dedicated section on technical architecture and system landscape design ensures readers understand deployment models, integration patterns, and performance considerations essential for success in complex enterprise environments. This is followed by a deep dive into master data management, the cornerstone of any logistics execution system, detailing how accurate and structured data supports high-efficiency operations. Subsequent chapters walk through warehouse process automation, transportation planning, and end-to-end process synchronization between EWM and TM. Special attention is given to advanced features like Value-Added Services (VAS), yard logistics, and dock appointment scheduling, all of which unlock greater efficiency in modern warehouses and distribution centres. With the rise of Industry 4.0, we explore the integration of robotics and automation technologies, such as AGVs, drones, and IoT sensors, into SAP-driven logistics processes. Equally important is the role of analytics, KPIs, and embedded monitoring tools that allow for continuous optimization and strategic planning. The final chapter brings theory into practice by showcasing industry-specific solutions and real-world case studies, demonstrating how leading enterprises have transformed their logistics functions using SAP EWM and TM. Throughout the book, you'll find practical insights, configuration strategies, tables, system diagrams, and data-driven examples to ensure the knowledge is both actionable and aligned with SAP S/4HANA best practices. Whether you're initiating a digital logistics transformation or optimizing an existing SAP deployment, this book equips you with the knowledge and foresight needed to architect future-ready logistics operations. We trust that this comprehensive volume will serve as your go-to resource in navigating the complexities and unlocking the full potential of SAP EWM and TM in enterprise logistics. Implementing PowerHA for IBM i Hernando Bedoya 2010-02-18 IBM® PowerHATM for i (formerly known as HASM) is the IBM high availability disk-based clustering solution for the IBM i 6.1 operating system. PowerHA for i when combined with IBM i clustering technology delivers a complete high availability and disaster recovery solution for your business applications running in the IBM System i® environment. PowerHA for i enables you to support high-availability capabilities with either native disk storage or IBM DS8000TM or DS6000TM storage servers. This IBM Redbooks® publication gives a broad understanding of PowerHA for i. This book is divided in four major parts: Part 1, "Introduction and Background" on page 1, provides a general introduction to clustering technology and some background. Part 2, "PowerHA for i setup and user interfaces" on page 69, describes and explains the different interfaces that PowerHA for i has. It also describes the migration process to this product and some sizing guidelines. Part 3, "Implementation examples using PowerHA for i" on page 319, explains how to use PowerHA for i with three major ERP solutions, such as SAP®, Lawson M3, and Oracle® JD Edwards®. Part 4, "Other IBM i 6.1 high availability enhancements" on page 349, explains additional IBM i 6.1 announced enhancements in high availability.

PRACTICAL GUIDE TO SAP TRANSPORTATION MANAGEMENT (TM) ANETTE GOTZ. TOBIAS GOTZ Scientific and Technical Aerospace Reports 1982

Transportation Management with SAP TM 9 Jayant Daithankar 2014-08-07 The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors and improved revenue through accurate invoicing. However a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. Transportation Management with SAP TM 9 is a guide for CIO/CXOs evaluating options for various transportation management solutions available in the market and helps inappropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM Implementation and roll outs to ensure preparedness. The book explains end-to-end freight life cycle processes, functional system landscape, implementation challenges and post go-live precautions required to optimize investments in SAP TM. Transportation Management with SAP TM 9 also acts as a step by step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9 which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage-transformation. The current book available in the market on SAP TM is based on Version 6 release which does not cover air freight processes. Our book covers end-to-end air freight configuration scenarios for logistic companies.
