*Staining of Facades* M. Y. L. Chew 2003 Facade staining is a centuries-old building defect that is globally widespread. Millions of dollars are wasted annually for its rectification. A stained building looks old and worn-out, diminishing the value of the property and the confidence in occupying it. The facade's durability may also be affected by staining. Despite these wide and varying downstream implications, facade staining can actually be foreseen and prevented if conscientious efforts are made at the building's planning and design stages. This book provides insight into the underlying causes of facade staining and proposes an approach to address the root of the problem. It aims to raise

awareness of crucial factors that should be understood and considered in the prevention or minimization of facade staining, hence reducing resource wastage in unnecessary maintenance work. Staining of Facades will serve as a useful guide for students as well as practitioners in related professions such as architecture, engineering, building, real estate, and project and property management, in their efforts to minimize the life-cycle costs of buildings. *Safety and Reliability of Complex Engineered Systems* Luca Podofillini 2015-09-03 Safety and Reliability of Complex Engineered Systems contains the Proceedings of the 25th European Safety and Reliability Conference, ESREL 2015, held 7-10 September 2015 in Zurich, Switzerland. Including 570 papers on theories and methods in the area of risk, safety and reliability, and their applications to a wide range of industrial, civil and social sectors, this book will be of interest to academics and professionals involved or interested in aspect of risk, safety and reliability in various engineering areas.
