**Introduction to Permanent Plug and Abandonment of Wells** Mahmoud Khalifeh 2020-01-27 This open access book offers a timely guide to challenges and current practices to permanently plug and abandon hydrocarbon wells. With a focus on offshore North Sea, it analyzes the process of plug and abandonment of hydrocarbon wells through the establishment of permanent well barriers. It provides the reader with extensive knowledge on the type of barriers, their functioning and verification. It then discusses plug and abandonment methodologies, analyzing different types of permanent plugging materials. Last, it describes some tests for verifying the integrity and functionality of installed permanent barriers. The book offers a comprehensive reference guide to well plugging and abandonment (P&A) and well integrity testing. The book also presents new technologies that have been proposed to be used in plugging and abandoning of wells, which might be game-changing technologies, but they are still in laboratory or testing level. Given its scope, it addresses students and researchers in both academia and industry. It also provides information for engineers who work in petroleum industry and should be familiarized with P&A of hydrocarbon wells to reduce the time of P&A by considering it during well planning and construction.

*Recent Advances in Offshore Renewable Energy* Yuquan Zhang 2025-11-25 Offshore renewable energy is a hot issue in the interdisciplinary fields of ocean engineering and power engineering. In recent years, due to climate change and the development of ocean engineering, the subject of offshore renewable energy has received increasing attention. Its development and utilization will be conducive to the development of a low-carbon economy and the realization of energy-saving and emission-reduction goals. It can achieve a complementary energy supply between land and sea, reducing the pressure on the traditional fossil energy supply in economically developed and energy-intensive coastal areas. The development of offshore renewable energy is a long-term process, but it is worth noting that with the development and gradual maturity of various technologies, offshore renewable energy will become the mainstream new energy in the future. This Research Topic focuses on recent advances in the development and utilization of offshore renewable energy, including research papers and review papers in the following directions, but are not limited to: (1) Efficient capture and utilization technology of renewable energy (wind energy, tidal energy, wave energy) (2) Offshore hydrogen production technology (3) Offshore photovoltaics (4) Offshore wind-fishing integration technology (5) Comprehensive utilization technology of multi-energy integrated system (6) Design technology for offshore mobile energy island (7) Fluid-structure coupling problem in renewable energy equipment (8) Application of machine learning in renewable energy equipment (9) Ocean engineering hydrodynamics (10) Fluid-structure interaction (11) New Energy Ships
