Empirical Studies of

Programmers Curtis R. Cook 1993 This volume looks at the obvious trend in the computing evolution from studies of student programmers and toward studies of real programmers performing real programming tasks. The percentage of student and professional programmers in the studies reported in papers presented at ESP 1 and ESP 5 has nearly flip-flopped. There is now an emphasis on the practical application of the research results both in industry and in academia. The papers and posters of this workshop include a range of programming language paradigms beyond the procedural paradigm: functional, logic, visual, object oriented and concurrent programming. This appears to be an indication of the maturation of the field. No

Object Oriented Programming Interview Questions And Answers

longer is it a question of whether to study programmers, but more a question of which aspects of the programming that make it an important area of study.

Threshold Concepts Within the Disciplines Ray Land 2008

Threshold Concepts within the Disciplines brings together leading writers from various

Object Oriented Programming Interview Questions And Answers

disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education. The foundational principle of threshold concepts is that there are, in each discipline, 'conceptual gateways' or 'portals' that must be negotiated to arrive at important new understandings. In crossing the portal, transformation occurs, both in knowledge and subjectivity. Such transformation involves troublesome knowledge, a key concern for contributors to this book, who identify threshold concepts in their own fields and suggest how to deal with them. Part One extends and enhances the threshold concept framework, containing chapters that articulate its qualities, its links to other social theories of learning and other traditions in educational research. Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing, engineering, biology, design,

modern languages, education and economics. In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts. Other chapters emphasise the equally important 'being and becoming' dimension of learning. Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers. The book will be of interest to disciplinary teachers, educational researchers and educational developers. It also is of relevance to issues in quality assurance and professional accreditation.
