Clay Materials Used in Construction George M. Reeves 2006 Concluding the trilogy on geological materials in construction, this authoritative volume reviews many uses of clays, ranging from simple fills to sophisticated products. Comprehensive and international coverage is achieved by an expert team, including geologists, engineers and architects. Packed with information prepared for a wide readership, this unique handbook is also copiously illustrated. The volume is dedicated to the memory of Professor Sir Alec Skempton. Various definitions of 'clay' are explored. Clay mineralogy is described, plus the geological formation of clay deposits and their fundamental materials

properties. World and British clay deposits are reviewed and explained. New compositional data are provided for clay formations throughout the stratigraphic column. Investigative techniques and interpretation are considered, ranging from site exploration to laboratory assessment of composition and engineering performance. Major civil engineering applications are addressed, including earthworks, earthmoving and specialized roles utilizing clays. Traditional earthen building is included and shown to dominate construction in places. Clay-based construction materials are detailed, including bricks, ceramics and cements. The volume also includes a comprehensive glossary.

[The Peter Fookes Engineering Geological Legacy in Geomodels,](#)

[Geomaterials and Geomorphology](#) J.S. Griffiths 2025-11-04 This book is a celebration of the life, work and legacy of Professor Peter G. Fookes (1933-2020). As a professional engineering geologist, he worked in over 100 countries, produced some 200 publications and was instrumental in setting up MSc programmes at Imperial College and Queen Mary College, London. From the Geological Society he was awarded the William Smith Medal (1985) and was the first recipient of the Glossop Medal (1996). Although a mainstream geologist, his background in chemistry ensured he was at the forefront in concrete research and the use of geomaterials. Working with academic geomorphologists (notably Denys Brunsten, David Jones, John Doornkamp and Sir Ron Cooke), he led the development of 'engineering geomorphology' as a genuine adjunct subject to engineering geology. In addition, his Glossop Lecture set engineering geology along the path of developing geomodels for use in understanding the ground conditions pertaining to engineering construction.
