Challenges for Health and Safety in Higher Education and Research Organisations Olga Kuzmina 2020-11-19 This book provides a summary of the main obstacles for creating and maintaining high standards of health and safety in higher education and research organisations. The obstacles include high staff turnover and an uncertain and constantly evolving research environment, small groups lacking unified management structure, deadline time pressures, restricted funding models and existing "old school" culture. Often the Health and Safety specialists and personnel managers in these organisations find themselves reiterating the same information, which gets lost as soon as the new cohort of workers arrives. Providing insight into methods of managing health and safety, training, and supervision, which help to build a strong and reliable health and safety system, this book is a collection of "best practices" from experienced safety professionals and researchers in Europe and the United States. These experiences demonstrate how health and safety professionals have overcome these issues and provide readers with ideas and models they can use in their own organisations. The information contained within is aimed at health and safety professionals and managers in universities and research organisations conducting scientific and engineering research with transient workers and students worldwide.

Biosafety and Biosecurity Jonathan Jaime G. Guerrero 2024-07-15 There are many guidelines, protocols and advisories that outline how biosafety and biosecurity can be adopted by institutions around the world. Whilst helpful, many of these are tailored to affluent Western nations. This leaves developing nations far behind since their laboratories and institutions are resource-scarce and biosafety and biosecurity are not mainstreamed entirely among the different laboratory workers, healthcare professionals, researchers, and academics. *Biosafety and Biosecurity: Practical Insights and Applications for Low and Middle-Income Countries* aims to bridge this gap by comprehensively summarizing the state and development of biosafety and biosecurity in developing and developed nations in a comparative analysis. This book includes basic concepts and principles of biosafety and biosecurity, including certification and legal frameworks, both international and local, and biosafety and biosecurity across disciplines including

environmental, medical, and special topics that are relevant to countries with comparable conditions. This proposed book solves the problem of the lack of a prescribed professional title that comprehensively summarizes the state and development of biosafety and biosecurity throughout the world, allowing the reader a 360 view of the subject area. This book will appeal to a global audience of biorisk officers, health and safety professionals and specialists in the life sciences, health and allied fields, environmental science, engineering, and plant and animal agriculture.
