Mutagenesis: exploring genetic diversity of crops N.B. Tomlekova 2023-09-04 In the present era various international organizations, such as FAO, UNO, IAEA, FNCA, etc., have unanimously agreed that millions of people in both developing and developed countries are not only facing a shortage of food, but also non-availability of nutrients. The main reason put forward by these agencies is that there is less genetic diversity prevalent in the major crops, which has been further diminished since the inception of conventional plant breeding. Since the first decade of the last century the mutation breeding

approach has been pivotal in enhancing the genetic diversity of crops, thereby enriching the genetic pool. 'Mutagenesis: exploring genetic diversity of crops' describes the latest achievements in mutation breeding, with a particular focus on the development of novel mutant varieties and F1 hybrids of crops highly superior to the parental ones. The book details experimental as well as literary studies of induced mutagenesis and its role in developing the new potent varieties. The book will be useful for agricultural policy making authorities in countries of agricultural importance, scientific researchers, breeders, teachers and students keen to use mutation breeding and to explore its hidden potential to secure food and nutrient availability for the growing world population.

Medicinal and Aromatic Plants of India, Vol. 4 Ákos Máthé 2026-02-11 This book is proposed as the 12th volume of the series "Medicinal and Aromatic Plants of the World". In continuation of the previous volumes, this volume contains a comprehensive compilation of further 32 selected important plant species, representatives of India's extremely rich biodiversity that have not been dealt with in the previous volumes. As such, this collection provides current scientific information highlighting the traditional, contemporary, and prospective uses of both well-known and lesser-known plant species. By the comprehensive description of individual species, the volume is meant to serve as a bridge between traditional knowledge and modern scientific advancements, providing a critical analysis of this broad interdisciplinary field with a particular focus on India. The chapters follow a structure of topics that has been well established in the previous volumes: such as the pharmacological properties, biochemical composition, and traditional as well as modern therapeutic applications of selected plant species. Readers will find contributions by recognized Indian scholars who delve into the innovative product development stemming from the ancient medicinal plant systems. Particular attention is given to how these plants can contribute to health and wellness in the era of global climate change and pandemics. This book invites readers to face critical questions about the survival and utilization of medicinal and

aromatic plants in India. Researchers, scholars, and practitioners in fields of botanical sciences, pharmacology, and traditional medicine will find this volume invaluable. It is also an essential resource for anyone interested in botanicals, plant-based nutraceuticals and herbal formulations. This book offers a wealth of knowledge that bridges rich ancient traditions with modern science.

Fundamentals of Biostatistics Bernard A. Rosner 2000 Bernard Rosner's FUNDAMENTALS OF BIOSTATISTICS is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems.

Medicinal and Aromatic Plants of India Vol. 2 Ákos Máthé 2023-10-31

This book is the 9th volume in the series Medicinal and Aromatic Plants of the World. India being one of the countries with the longest and richest past/present/future of Medicinal and Aromatic Plant (MAP) production and utilization has accumulated more than sufficient knowledge to fill two volumes. This is shown by the vivid interest of Indian colleagues to contribute. Similar to the previous volumes, this one deals with the various important aspects (from botanical through phytochemical to pharmacological) of MAPs', famous or simply known of India. Scientific and technological achievements will be equally presented. In addition to the first volume, India V1, this volume is aimed to look carefully at our present knowledge of this vast interdisciplinary domain with an Indian focus. In the era of global climate change and pandemics, building on the huge Indian traditions, this book is expected to make an important contribution to the better knowledge and understanding of MAPs.
