LIMS Richard Mahaffey 2012-12-06 Computing and information management technologies touch our lives in the environments where we live, play and, work. High tech is becoming the standard. Those of use who work in a laboratory environment are faced with an obvious challenge. How do we best apply these technologies to make money for our companies? The first level of deliverable benefits is achieved through task automation. The second level is obtained by integrating the individual islands of automation. The third, or top level, of benefits is related to applying intelligence to computing applications. The use of computing technology, at level one, to automate lab procedures, methods, and instruments has been profitable for many years. We can easily find yearly returns in the range of 10-50% for investments at this level. For level two, the integration of some applications has evolved and has led to data management systems and local area networking in the lab environment. Investment paybacks at level two are substantially higher, in the range of 200-400%. Examples of applications at the top level, that of intelligent systems and applications, are few and far between. And what about the payback for investments at this level? With such limited experience at level three, we can only estimate the benefits. But again, they appear to be much higher, in the range of 2000- 4000%.

Laboratory Practice 1992

LIMS A S Nakagawa 2007-10-31 There is currently a high level of interest in Laboratory Information Management Systems (LIMS), which, when successfully implemented, can revitalize the operations of a laboratory and contribute significantly to the effectiveness and efficiency of the overall enterprise. LIMS describes the strategy, planning, resources, and activities needed to integrate LIMS and its supporting technologies into an organization. It covers all aspects of implementation

and management and has the benefit of not being product specific. This book will not date as it is not restricted to a particular software product, hardware platform, or technical automation approach. Instead it deals with the issues, expertise, organization, and resources that contribute to the successful implementation of LIMS. The author has wide experience of automated laboratory systems in the chemical, pharmaceutical, environmental, and biotechnology industries, and for the past 15 years has been intimately involved in every aspect of LIMS implementations including justification, system selection, installation, project management, developing, training, validation, performance optimization, and maintenance. LIMS contains numerous illustrations and tables to highlight concisely the major points and concepts discussed in each chapter. The book is essential reading for laboratory, information systems and project managers responsible for the implementation of LIMS and, as it does not require any previous knowledge of computers or laboratory information management systems, is easily accessible to all.

Professional Issues in Forensic Science Max M. Houck 2015-04-15 Professional Issues in Forensic Science will introduce students to various topics they will encounter within the field of Forensic Science. Legal implications within the field will focus on expert witness testimony and procedural rules defined by both legislative statute and court decisions. These decisions affect the collection, analysis, and court admissibility of scientific evidence, such as the Frye and Daubert standards and the Federal Rules of Evidence. Existing and pending Forensic Science legislation will be covered, including laws governing state and national DNA databases. Ethical concerns stemming from the day-to-day balancing of competing priorities encountered by the forensic student will be discussed. Such competing priorities may cause conflicts between good scientific practice and the need to expedite work, meet legal requirements, and satisfy client's wishes. The role of individual morality in Forensic Science and competing ethical standards between state and defense experts will be addressed. Examinations of ethical guidelines issued by various professional forensic organizations will be conducted. Students will be presented with examples of ethical dilemmas for comment and resolution. The management of crime laboratories will provide discussion on quality assurance/quality control practices and the standards required by the accreditation of laboratories and those

proposed by Scientific Working Groups in Forensic Science. The national Academy of Sciences report on Strengthening Forensic Science will be examined to determine the impact of the field. Professional Issues in Forensic Science is a core topic taught in forensic science programs. This volume will be an essential advanced text for academics and an excellent reference for the newly practicing forensic scientist. It will also fit strategically and cluster well with our other forensic science titles addressing professional issues. - Introduces readers to various topics they will encounter within the field of Forensic Science - Covers legal issues, accreditation and certification, proper analysis, education and training, and management issues - Includes a section on professional organizations and groups, both in the U.S. and Internationally - Incorporates effective pedagogy, key terms, review questions, discussion question and additional reading suggestions
