Hydrocarbon Fluid Inclusions in Petroliferous Basins Vivekanandan Nandakumar 2021-06-24 Hydrocarbon Fluid Inclusions in Petroliferous Basins trains readers to detect Hydrocarbon Fluid Inclusions (HCFIs) in sedimentary rocks, particularly the wafer preparation techniques to visualize HCFIs, its distinction from aqueous inclusions, petrographic

approaches to HCFIs, microthermometric observations on HCFIs, fluorescence emission spectra and Raman spectra of HCFIs, and their interpretations for the petroleum industry. The book features case studies from the Mumbai and Kerala Konkan Basins of the Western Offshore of India - two representative basins where new, non-destructive, fluid inclusion techniques were tested. This book is essential reading for students of petroleum geology and those working in exploration in the oil and gas industry. - Helps readers to identify Hydrocarbon Fluid Inclusions (HCFIs) in sedimentary basins - Covers how to determine the oil window, API gravity and chemical constituents in HCFIs - Includes case studies on key offshore basins

Current Topics in Ionizing Radiation Research Mitsuru Neno 2012-03-09

Since the discovery of X rays by Roentgen in 1895, the ionizing radiation has been extensively utilized in a variety of medical and industrial applications. However people have shortly recognized its harmful aspects through inadvertent uses. Subsequently people experienced nuclear power plant accidents in Chernobyl and Fukushima, which taught us that the risk of ionizing radiation is closely and seriously involved in the modern society. In this circumstance, it becomes increasingly important that more scientists, engineers and students get familiar with ionizing radiation research regardless of the research field they are working. Based on this idea, the book "Current Topics in Ionizing Radiation Research" was designed to overview the recent achievements in ionizing radiation research including biological effects, medical uses and principles of radiation measurement.

Cai Guo-Qiang Rachel Rivenc 2025-06-24 This groundbreaking book provides the first material study of the celebrated contemporary artist Cai Guo-Qiang, known worldwide for his use of subversive materials, particularly gunpowder. Cai Guo-Qiang (China, b. 1957) is among the most prominent contemporary artists active today. His prolific, diverse

creative practice—which includes gunpowder drawings and paintings, explosion events, videos, multimedia installations, and site-specific works—draws on a personal belief system that freely blends symbols and tenets from Eastern and Western traditions. Cai's output seeks to establish dialogues among different cultures, different periods of time, and even different species—always while probing our shared humanity and the connections that can be divined across space and time, out of chaos and disorder. Based on in-depth interviews between the author and artist and with studio assistants, as well as extensive examination, sampling, and scientific analysis of a wide range of artworks, this publication addresses the implications of Cai's distinctive materials and processes and their associated conservation issues. Written for conservation scientists, conservators, specialists in contemporary art history, museum curators, collections managers, practicing artists, collectors, and art enthusiasts, this book offers insights into the life, methods, and materials of a leading figure in the art world. The technical discussions provide essential findings that will inform strategies for the future care of his works.
