Childhood and the Nation in Latin American Literature Richard L. Browning 2001 This truly interdisciplinary work utilizes literature as a primary resource in examining the concept of childhood and how it is exploited and explored in nineteenth- and twentieth-century Latin America. Little has been published on the history of childhood or children in Latin America. Whether equating the child's potentiality with that of the nation, or drawing an analogy between parent-child and state-citizen relationships; whether using the child as representative of marginalized sectors of society, or equating the status and role of the author in society with those of the child, in the end such literary treatments of childhood result in a dehumanization of the child performed in the name of constructing a national identity.

Cybersecurity Lobo, Victor 2022-06-24 The growth of innovative cyber threats, many based on metamorphosing techniques, has led to security breaches and the exposure of critical information in sites that were thought to be impenetrable. The consequences of these hacking actions were, inevitably, privacy violation, data corruption, or information leaking. Machine learning and data mining techniques have significant applications in the domains of privacy protection and cybersecurity, including intrusion detection, authentication, and website defacement detection, that can help to combat these breaches. Applications of Machine Learning and Deep Learning for Privacy and Cybersecurity provides machine and deep learning methods for analysis and characterization of events regarding privacy and anomaly detection as well as for establishing predictive models for cyber attacks or privacy violations. It provides case studies of the use of these techniques and discusses the expected future developments on privacy and cybersecurity applications. Covering topics such as behavior-based authentication, machine learning attacks, and privacy preservation, this book is a crucial resource for IT specialists, computer engineers, industry professionals, privacy specialists, security professionals, consultants, researchers, academicians, and students and educators of higher education.
