How to Prepare for the ACT - American College Testing Program Assessment

George Ehrenhaft 1995-02 Shows how to prepare for the ACT, offering subject reviews, advice, and sample tests.

Quality

Ivan Barofsky 2011-10-02 Quality, as exemplified by Quality-of-life (QoL) assessment, is frequently discussed among health care professionals and often invoked as a goal for improvement, but somehow rarely defined, even as it is regularly assessed. It is understood that some medical patients have a better QoL than others, but should the QoL achieved be compared to an

ideal state, or is it too personal and subjective to gauge? Can a better understanding of the concept help health care systems deliver services more effectively? Is QoL worth measuring at all? Integrating concepts from psychology, philosophy, neurocognition, and linguistics, this book attempts to answer these complex questions. It also breaks down the cognitive-linguistic components that comprise the judgment of quality, including description, evaluation, and valuations, and applies them to issues specific to individuals with chronic medical illness. In this context, quality/QoL assessment becomes an essential contributor to ethical practice, a critical step towards improving the nature of social interactions. The author considers linear, non-linear, and complexity-based models in analyzing key methodology and content issues in health-related QoL assessment. This book is certain to stimulate debate in the research and scientific communities. Its

forward-looking perspective takes great strides toward promoting a common cognitive-linguistic model of how the judgment of quality occurs, thereby contributing important conceptual and empirical tools to its varied applications, including QoL assessment.

Childhood Language Disorders in Context Nickola Nelson 1993 Here is a comprehensive introduction to language disorders in children...one whose two-fold developmental/contextual perspective acknowledges that children's language learning systems include not only their skills, knowledge, and biological abilities...but also their language background, family settings, and the context

in which they are attempting to learn language. The text's primary focus is on perspectives from normal development, and the bulk of the coverage is devoted to examination of expectations for early (infant through toddler), middle (preschool through early elementary), and later (middle elementary through adolescent) stages of learning language. These developmentally-gearred divisions are then used to guide discussions of language assessment and intervention for children who are not learning language normally, yet who have characteristics in common with their peers who are.
