

Analyse Factorielle Des Correspondances Pour Lindexation

Analyse factorielle des correspondances pour l'indexation et la recherche d'information dans une grande base de données d'images Nguyen-Khang Pham 2009 Avec le développement du numérique, le nombre d'images stockées dans les bases de données a beaucoup augmenté. L'indexation des images et la recherche d'information dans les bases d'images sont plus compliquées que dans le cas de documents textuels. Des méthodes d'indexation déjà utilisées en analyse de données textuelles sont proposées pour traiter des images. Pour transférer les résultats de l'analyse de données textuelles aux images, il est nécessaire d'utiliser de nouvelles caractéristiques: les mots visuels et on considère les images comme documents. Nous nous intéressons au problème d'indexation et de recherche d'information dans des grandes bases de données d'images à l'aide de méthodes d'analyse de données, comme l'Analyse Factorielle des Correspondances (AFC). Nous proposons d'abord une utilisation astucieuse des indicateurs de l'AFC pour accélérer la recherche après l'avoir adaptée aux images. Nous nous intéressons ensuite au problème du passage à l'échelle de l'AFC. Pour ce faire, nous proposons un algorithme d'AFC incrémentale pour traiter de grands tableaux de données et la parallélisation de cet algorithme sur processeurs graphiques (GPU). Nous développons aussi une version parallèle de notre algorithme de recherche qui utilise des indicateurs de l'AFC sur GPU. Puis, nous associons l'AFC à d'autres méthodes comme la Mesure de Dissimilarité Contextuelle ou les forêts aléatoires pour améliorer la qualité de la recherche. Enfin, nous présentons un environnement de visualisation, CAViz, pour accompagner les traitements précédents.

Manuel d'analyse du web - 2e éd. Christine Barats 2016-02-03 La place qu'occupe le web, en tant que dispositif sociotechnique, dans les sociétés du XXIe siècle, n'est plus à démontrer et suscite une demande nouvelle de savoirs et de savoir-faire. Ce manuel, premier sur cet objet, propose un état actuel des savoirs et des références, tant méthodologiques que théoriques, sur l'observation et l'analyse du web en sciences humaines et sociales. Les auteurs mettent l'accent sur ce que change le web dans le choix et l'appropriation de méthodes issues des SHS : Quelle place accorder à la dimension technique ? Comment constituer et collecter des « observables » ? Comment repenser les notions de « documents », de « données » ? Le parti-pris de l'ouvrage est délibérément pédagogique : chaque auteur explicite ses pratiques de recherche et les cadres nécessaires à la connaissance scientifique. Il s'adresse aux étudiants qui commencent une recherche afin de les accompagner dans la construction de leur « terrain », tout autant qu'aux chercheurs confirmés ou aux enseignants qui souhaitent nourrir leur réflexion sur le sujet. Christine Barats, maître de conférences à l'université Paris Descartes et chercheuse au Céditec de l'université Paris-Est Créteil, a dirigé cet ouvrage collectif. Ouvrage publié avec le soutien du laboratoire Céditec.
