Human-Centric Computing**

Kenneth C. Laudon 2002
Exceptionally practical in approach, this book prepares learners for the constantly changing demands of using information systems as managers in today's fast-paced organizations--first by relating MIS to management, the organization and technology, focusing on the importance of integrating these elements; second by tracking emerging technologies and organizational trends; and third by consistently using examples taken from real businesses, both domestic and foreign. A four-part organization covers organizations, management and the networked enterprise; information technology infrastructure; management and organizational support systems for the digital firm; and building information systems in the digital firm. For business managers in the 21st century.

Managing Innovation Adoption
Dr Majharul Talukder

2014-04-28 When Innovation is considered one of the key drivers of corporate success, why do organisations struggle to implement it? Research suggests that innovations fail due to a lack of acceptance by employees; therefore an understanding of potential adopters and the factors influencing their decisions is essential. Despite much research on adoption of innovation by an organization, very little is known about its acceptance by individuals within it. *Managing Innovation Adoption* addresses this by presenting a new theoretical framework. The data collected proves that Dr Talukder's enhanced model, based on the theory of reasoned action (TRA), the technology acceptance model (TAM) and other conceptual frameworks,

Quality should be treated as a culture of success in the market. Enterprises focused on quality will survive in the long term in this new environment because quality is what may create a real and robust link between a company and its clients, and these clients should always be considered the heart of any business; without them, there is neither option nor sense to continue any activity in a company.

The Strategic Management of Information Systems

Joe Peppard 2016-04-18 A comprehensively updated revision of a book regarded by many as one the leading and authoritative titles for practitioners, academics and students in the domain of information systems and technology (IS/IT) strategy. Presents a structured framework with tools, techniques and ways of thinking which provide a practical approach to building a digital strategy, expressed primarily in the language of business and management. Brings together the implications of the significant advances in IT and the most useful current thinking, research, and experiences concerning the business impact and strategic opportunities created by IS/IT. Peppard and Ward discuss the key questions

with of where, when and how to invest in IS/IT, which is why a IS/IT (or digital) strategy is required.

Business Transformation Essentials Axel Uhl 2016-04-08

Transformation programs are an common feature of global companies carrying out major strategic change projects. These programs combine business and technical expertise to bring together management and information systems. Managers rate firms' transformation competencies relatively poorly, and the success rate of such endeavours is correspondingly low. Using a variety of case studies including: Allianz SE, Shell, SAP, Vodafone, and Mercedes-Benz, this book provides unprecedented insights into characteristics of current transformation programs and the potential that can be leveraged by applying a holistic transformation management approach.

Business Transformation Management Methodology And Handbook Industry 4.0

Walter Frenz 2022-06-22 The handbook presents an overview of Industry 4.0 and offers solutions for important practical questions. The law and its current challenges regarding data assignment (who owns the data? / EU guidelines), data security, data protection (General Data Protection Regulation), cyberattacks, competition law (right to access vs. monopolists, permissible and prohibited exchanges of information, possible collaborations) is the point of departure. In turn, the book explores peculiarities in specific areas of Industry 4.0 (Internet of Production, mechanical engineering, artificial intelligence, electromobility, autonomous driving, traffic, medical science, construction, energy industry, etc.). The book's closing section addresses general developments in management, the digital transformation of companies and the world of work, and ethical questions.
