Concepts in Biology Eldon

Enger 2008-01-16

Enger/Ross/Bailey: Concepts in Biology is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship between these two main subject areas. The new, 13th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors

will appreciate the book's scientific accuracy, complete coverage and extensive supplement package.

Introduction to Nutrition, Exercise, and Health Victor L.

Katch 1993 A resource companion to the textbook, Introduction to nutrition, exercise, and health. Its purpose is to facilitate understanding of the text by focusing on key terms and concepts and on specific questions within each chapter. Includes self-assessment tests (with answers) and helpful hints for studying and preparing for exams.

The Biology of Epithelial Cell

Populations Nicholas A. Wright 1984 This book brings together in a critical study, current research on epithelial cell populations. It sets out to analyse the principles by which epithelial cell populations are

organized, in terms of the function of their component populations. The approach is both descriptive and operational giving special emphasis to epithelial cell lineages, three-dimensional organization, methodology for measuring epithelial cell population sizes and proliferative rates, epithelial stem cell populations, growth reactions, response to cytotoxic insult, carcinogenesis, and epithelial growth control. The book is directed primarily at those who are interested in the organization of proliferating and differentiating tissue systems, in terms of their contained cell lineages. There are many lessons in epithelia for those studying growth control since they are in many situations ideal models upon which to test general ideas and concepts. The authors also indicate the most important new research areas and provide advice on the practical approach to problems in epithelial cell proliferation and its control.

Psychology: The Science of Person, Mind, and Brain Daniel Cervone 2015-01-28 In Psychology: The Science of Person, Mind, and Brain, experienced teacher, researcher, and author Daniel Cervone provides students with a new and exciting way of understanding psychology. Cervone organizes material around three levels of analysis - person, mind, and brain -- and employs a person-first format that consistently introduces topics at the person level: theory and research on the lives of people in sociocultural contexts. Students are able to make sense of the latest research through what they understand best: people. With fellow teacher and researcher Tracy Caldwell, Cervone has conceived a text beyond the print experience from the ground up, integrating online immersive research experiences and assessment tools that capitalize on research findings on pedagogy and student learning (e.g., the testing effect). Pedagogical Author, Tracy L. Caldwell

Working closely with Daniel Cervone, fellow teacher and researcher Tracy Caldwell of Dominican University developed the book's pedagogical program from the Preview Questions at the beginning of each section to the Self-Tests at the end of each chapter. The pedagogy is designed to engage students at multiple levels of Bloom's taxonomy and at multiple points in each chapter.

The Sceptical Optimist Nicholas Agar 2015-07-09 The rapid developments in technologies -- especially computing and the advent of many 'smart' devices, as well as rapid and perpetual communication via the Internet -- has led to a frequently voiced view which Nicholas Agar describes as 'radical optimism'. Radical optimists claim that accelerating technical progress will soon end poverty, disease, and ignorance, and improve our happiness and well-being. Agar disputes the claim that technological progress will automatically produce great improvements in subjective

well-being. He argues that radical optimism 'assigns to technological progress an undeserved pre-eminence among all the goals pursued by our civilization'. Instead, Agar uses the most recent psychological studies about human perceptions of well-being to create a realistic model of the impact technology will have. Although he accepts that technological advance does produce benefits, he insists that these are significantly less than those proposed by the radical optimists, and aspects of such progress can also pose a threat to values such as social justice and our relationship with nature, while problems such as poverty cannot be understood in technological terms. He concludes by arguing that a more realistic assessment of the benefits that technological advance can bring will allow us to better manage its risks in future.
