Corporate Tax Evasion in a Globalized Environment Alexander Teepe 2007-02-13 Inhaltsangabe:Abstract: There are only few results of empirical research about corporate tax evasion and avoidance in comparison to individual tax evasion. One reason is a lack of exact data. Moreover, due to the nature of tax non-compliance it is not easy to calculate its volume. There is set of empirical questions on which we can make progress, such as the determinants of corporate evasion, for example the impact of penalties on corporate tax directors in large enterprises or the size of a company and the owner structure. It is material for policymakers to know which characteristic of enterprises let us assume that a firm evades more or less and which circumstances enhance corporate tax evasion. We suggest that the developments in a more globalized world may change incentives for non-compliance of enterprises and change the options to evade taxes, in particular for import or export firms. The growing importance of transfer prices for tax directors of multinational enterprises may emphasize this assumption. But not only large multinational enterprises have options to evade taxes. Also smaller companies controlled by private owners can misstate import and export invoices in order to shift profits into low-tax countries or tax haven countries or build up capital in the informal economy. We analyze the existing basic theory and provide a critical discussion to it. And we survey the existing empirical literature about corporate tax evasion. Furthermore, we present the results of a corporate tax survey in China and Germany. By this survey related to import and export firms of all size, evidence is provided that there are remarkable incentives to evade taxes by manipulation of commercial invoices. We find that this type of tax evasion by importers and exporters is basically determined by the same effects as corporate tax compliance in general but there are in addition specific effects on compliance, such as effects by trading countries of the firms or by the supply chain. Finally, this paper presents various indications which imply the need of an international framework to analyze corporate tax compliance. Public Program Evaluation Laura Langbein 2014-12-18 This readable and comprehensive text is designed to equip students and practitioners with the statistical skills needed to meet government standards regarding public program evaluation. Even those with little statistical training will find the explanations clear, with many illustrative examples, case studies, and applications. Far more than a cookbook of statistical techniques, the book begins with chapters on the overall context for successful program evaluations, and carefully explains statistical methods--and threats to internal and statistical validity--that correspond to each evaluation design. Laura Langbein then presents a variety of methods for program analysis, and advise readers on how to select the mix of methods most appropriate for the issues they deal with-- always balancing methodology with the need for generality, the size of the evaluator's budget, the availability of data, and the need for quick results.

Dynamic Decision and Adjustment Processes in Commuter Behavior Under Real-time Information Karthik K. Srinivasan 2002 Advanced Traveler Information Systems (ATIS), by providing real-time traffic information, can assist trip-makers in selecting efficient travel choices, and aid the attainment of desirable system goals including reduced costs and increased efficiencies. The success of ATIS in achieving such goals critically depends on user behavior in response to information. This research focuses on investigating dynamic aspects in commuter behavior under real-time information. A dynamic interactive travel-behavior simulator, that enables a consistent representation of the nonlinear time-dependent interactions between network performance, trip-makers choices, and information, is used to observe trip-maker behavior. Using the simulator, interactive experiments are conducted where a range of experimental factors including network loading, day-to-day traffic evolution and ATIS information strategies are varied and the consequent trip-maker behavior is observed. Constituent models are proposed to analyze the choice dimensions of route, departure time, and compliance. The dynamic kernel logit (DKL) formulation is presented for analyzing these data and its theoretical and computational suitability established.

The results confirm the significance of compliance and inertia as key mechanisms influencing route choice. Departure time adjustments appear to be based on a sequential heuristic search. Calibrated models also provide evidence of learning, adjustment, perception, judgment, and updating processes in trip-maker behavior. Empirical results indicate that real-time information and time-dependent network conditions are strong determinants of trip-maker behavior in a commuting context. The nature and quality of ATIS information (accuracy and reliability), the magnitude of network loading and its day-to-day evolution, and users' past traffic experience are important influences on how commuters select routes and departure times. At the unobserved level, general dynamic and stochastic patterns, including, heterogeneity, state-dependence, habit-persistence, and correlations are present in trip-makers' decisions. These substantive results have important implications for network state prediction, travel demand forecasting, design and evaluation of ATIS services and deployment of Intelligent Transportation System (ITS) programs. User behavior models developed here can be integrated with dynamic network traffic assignment models to obtain more accurate system performance modeling capabilities with considerable applications in tactical and strategic system planning and traffic operations.

The SAGE Encyclopedia of Social Science Research Methods

Michael Lewis-Beck 2004 'Appreciative users of this volume will be students, faculty, and researchers in academic, special, and large public libraries, for whom it is recommended' - Library Journal 'The compilers of this impressive, unique work claim it "brings together, in one place, authoritative essays on virtually all social science methods topics, both quantitative and qualitative" - a claim examination supports. More than 400 contributors from the US and abroad present approximately 1,000 comprehensive, in-depth, well-referenced entries that vary in length from 50 to 2,500 words. The attractively designed and produced volumes, 1,351 total pages, consist of easily legible text and figures, the front matter occupying 46 pages and the index 40.... This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels. As a teaching resource it will be useful to instructors and students alike and will become a standard reference source.

Essential for general and academic collections' - Choice SAGE Reference is proud to announce The SAGE Encyclopedia of Social Science Research Methods, a three-volume resource that is a first of its kind, developed by the leading publisher of social science research methods books and journals. This unique multi-volume reference set offers readers an all-encompassing education in the ways of social science researchers. Written to be accessible to general readers, entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods. The Encyclopedia features two major types of entries: definitions, consisting of a paragraph or two, which provide a quick explanation of a methodological term; and topical treatments or essays, discussing the nature, history, application/example and implication of using a certain method. Also included are suggested readings and references for future study. To help provide a more complete explanation than is often achieved within the scope of a single article, key terms and concepts appear in small capital letters to refer readers to related terms explained elsewhere. In addition to epistemological issues that influence the nature of research questions and assumptions, The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology, from philosophical issues such as poststructuralism to advanced statistical techniques. In covering the full range of qualitative and quantitative data analyses, this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation. Many entries treat traditional topics in a novel way, stimulating both interest and new perspectives. One example is the entry Econometrics, by Professor Damodar Gujarati. Following a process which many educators preach but seldom practice, Gujarati walks the reader twice through the

research process from economic theory to data and models to analysis, once in principle and a second time with an example. In using the ordinary process of economic research to achieve an extraordinary impact, he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics. Topics Covered: - Analysis of Variance - Association and Correlation - Basic Qualitative Research - Basic Statistics - Causal Modeling (Structural Equations) - Discourse/Conversation Analysis - Econometrics - Epistemology - Ethnography - Evaluation - Event History Analysis - Experimental Design - Factor Analysis and Related Techniques - Feminist Methodology - Generalized Linear Models - Historical/Comparative - Interviewing in Qualitative Research - Latent Variable Model - Life History/Biography - Loglinear Models (Categorical Dependent Variables) - Longitudinal Analysis - Mathematics and Formal Models - Measurement Level - Measurement Testing and Classification - Multiple Regression - Multilevel Analysis - Qualitative Data Analysis - Sampling in Surveys - Sampling in Qualitative Research - Scaling - Significance Testing - Simple Regression - Survey Design - Time Series Key Features: - Over 900 entries arranged A to Z Each entry is written by a leading authority in the field, covering both quantitative and qualitative methods - Covers all disciplines within the social sciences - Contains both concise definitions and in-depth essays - Three volumes and more than 1500 pages
