Senior Design Projects in Mechanical Engineering Yongsheng Ma 2021-11-10 This book offers invaluable insights about the full spectrum of core design course contents systematically and in detail. This book is for instructors and students who are involved in teaching and learning of 'capstone senior design projects' in mechanical engineering. It consists of 17 chapters, over 300 illustrations with many real-world student project examples. The main project processes are grouped into three phases, i.e., project scoping and specification, conceptual design, and detail design, and each has dedicated two chapters of process description and report content prescription, respectively. The basic principles and engineering process flow are well applicable for professional development of mechanical design engineers. CAD/CAM/CAE technologies are commonly used within many project examples. Thematic chapters also cover student teamwork organization and evaluation, project management, design standards and regulations, and rubrics of course activity grading. Key criteria of successful course accreditation and graduation attributes are discussed in details. In summary, it is a handy textbook for the capstone design project course in mechanical engineering and an insightful teaching guidebook for engineering design instructors.

Engineering Design Clive L. Dym 2004 Written for introductory courses in engineering design, this text illustrates conceptual design methods and project management tools through descriptions, examples, and case studies.

Trends in Control and Measurement Education D.P. Atherton

2014-06-28 This volume is the published Proceedings of selected papers from the IFAC Symposium, Swansea, 11-13 July 1988, where a forum was provided for discussion of the latest advances and techniques in the education of control and instrument engineers. Seven major topics were covered to aid lecturers in understanding, developing and presenting systems engineering - control and measurement - as a subject to undergraduate and postgraduate students. The teaching of real-time computer control as a topic and laboratory experiments for both continuous and discrete systems were discussed, as was process control, with the emphasis on providing the student with engineering experience by using scaled-down equipment which would teach practical skills. Included in the Proceedings are papers on measurement and instrumentation, an area felt to be neglected within academic instruction. The development of software tools for systems design within systems engineering was included, as was the exchange of teaching packages and methods between academics, and the education curriculum of systems engineering within developing countries. These Proceedings will prove to be a useful up-to-date guide and reference source for all lecturers and professors involved in curriculum development and the teaching of control and measurement in systems engineering.

The Struggle for Justice, Equity, and Peace in the Global

Classroom McClean, Marva 2023-06-23 In the current state of global upheaval with the rallying call for human rights and justice for people who have been historically marginalized, the curriculum must be decolonized to ensure that children identified as marginalized and at risk are receiving an equitable education that is based on respect and acceptance of their cultural heritage as well as their human rights. The Struggle for Justice, Equity, and Peace in the Global Classroom investigates the global classroom as a site of transformation for educators who dare to take action to replace oppressive and repressive practices with emancipatory strategies grounded in critical consciousness. The book's contents convey the pluralism that defines America and the world, investigating how educators can re-envision the future through an engagement with the past and an understanding of how the historical continuities of racial intolerance and social injustice continue to impact classroom teaching and the outcomes of children whose lives are shaped by the aftermath of slavery and oppression. Covering topics such as colonial education, inclusive classrooms, and student agency, this premier reference source is an excellent resource for teachers, school administrators, literary scholars, community activists, teacher educators, preservice teachers, researchers, and academicians.
