Tree Breeding at the Institute of Forest Genetics (Classic Reprint)

United States. Forest Service 2017-11-10 Excerpt from Tree Breeding at the Institute of Forest Genetics In 1924 Mr. Eddy and Lloyd Austin, whom he employed to direct the work and who served in this capacity until 1940, sought a suitable location for the tree-breeding station. All of the milder timber-growing sections of the United States were considered, most of them being visited by Mr. Eddy or by Mr. Austin. They compared climatic data, soils, accessibility, and other important requisites for tree growing, and finally chose the vicinity of Placer ville, Calif, for the work. On a site embracing 106 acres 3 miles east of the city, they established the Eddy Tree Breeding Station. Clearing of land and collecting of seed started in 1925. The Conifers: Genomes, Variation and Evolution

David B. Neale 2019-03-23 This book is the first comprehensive volume on conifers detailing their genomes, variations, and evolution. The book begins with general information about conifers such as taxonomy, geography, reproduction, life history, and social and economic importance. Then topics discussed include the full genome sequence, complex traits, phenotypic and genetic variations, landscape genomics, and forest health and conservation. This book also synthesizes the research included to provide a bigger picture and suggest an evolutionary trajectory. As a large plant family, conifers are an important part of economic botany. The group includes the pines, spruces, firs, larches, yews, junipers, cedars, cypresses, and sequoias. Of the phylum Coniferophyta, conifers typically bear cones and evergreen leaves. Recently, there has been much data available in conifer genomics with the publication of several crop and non-crop genome sequences. In addition to their economic importance, conifers are an important habitat for humans and animals, especially in developing parts of the world. The application of genomics for improving the productivity of conifer crops holds great promise to help provide resources for the most needy in the world.

A Bibliography on Forest Genetics and Forest Tree Improvement, 1958-59 (Classic Reprint) Jonathan William Wright 2018-09-30

Excerpt from A Bibliography on Forest Genetics and Forest Tree Improvement, 1958-59 Insofar as possible, we have included all references on hereditary variations in trees or on techniques peculiar to tree breeding research. We did not attempt to include references from the several related disciplines which are important in tree improvement work because of the vastness of the tree breeding literature. In all, more than articles are listed. The bibliography is arranged alphabetically by senior author. An index by subject matter begins on page 89.
