**Critical Reading for College and Beyond** Deborah B. Daiek 2004 "Critical Reading for College and Beyond focuses on teaching intermediate to advanced level developmental education students the critical reading and thinking strategies they need to get the most out of college textbooks and other reading material. The text teaches students specific steps to follow in organizing textbook information, so that they can remember it and access it effectively when needed. Regular journaling and self-monitoring through CATs (Classroom Assessment Techniques) allow students to make adjustments necessary to improving their reading skills."--Publisher's description.

Contemporary Approaches to Activity Theory: Interdisciplinary Perspectives on Human Behavior Hansson, Thomas 2014-10-31 The human mind is best understood when it is studied in the context of meaningful and goal-oriented interactions between individuals and their environment. These internal and external activities help to shape the human consciousness and experience. Contemporary Approaches to Activity Theory: Interdisciplinary Perspectives on Human Behavior is an opportunity to study the complex, socially-oriented contexts of humans by considering the entirety of our environments: cultures, motivations, signs and tools, and various activities. Highlighting strategies in design, educational and work practice, and methodological analysis, this book is an essential reference source for academicians, researchers, and students interested in gaining a thorough understanding of the interaction between humans and their environments.

**Mapping Biology Knowledge** K. Fisher 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology, promoting meaningful learning and knowledge mapping as a strategy for achieving this goal. Meaning-making and meaning-building are examined from multiple perspectives throughout the book. In many biology courses, students become so mired in detail that they fail to grasp the big picture. Various strategies are proposed for helping instructors focus on the big picture, using the 'need to know' principle to decide the level of detail students must have in a given situation. The metacognitive tools described here serve as support systems for the mind, creating an arena in which learners can operate on ideas. They include concept maps, cluster maps, webs, semantic networks, and conceptual graphs. These tools, compared and contrasted in this book, are also useful for building and assessing students' content and cognitive skills. The expanding role of computers in mapping biology knowledge is also explored.
