*Experimental Stress Analysis for Materials and Structures* Alessandro Freddi 2015-03-26 This book summarizes the main methods of experimental stress analysis and examines their application to various states of stress of major technical interest, highlighting aspects not always covered in the classic literature. It is explained how experimental stress analysis assists in the verification and completion of analytical and numerical models, the development of phenomenological theories, the measurement and control of system parameters under operating conditions, and identification of causes of failure or malfunction. Cases addressed include measurement of the state of stress in models, measurement of actual loads on structures, verification of stress states in circumstances of complex numerical modeling, assessment of stress-related material damage, and reliability analysis of artifacts (e.g. prostheses) that interact with biological systems. The book will serve graduate students and professionals as a valuable tool for finding solutions when analytical solutions do not exist.

## **New trends in esports and gaming:**

### **analyzing the impact of esports and video games on body composition, psychological state and health of gamers/players**

Raquel Vaquero-Cristóbal 2024-12-02 The field of video games and esports is currently booming, being one of the industries that has grown the most in recent decades. This has given rise to numerous investigations that have sought to delve deeper into the field. However, the vast majority of research to date has analyzed the performance of esports players and its influence on physical and mental parameters of the players. However, the "healthy domain" of video games is still unexplored. So far, little research has analyzed the possibilities offered by esports and video games in the educational and health fields, but the results obtained are encouraging. Thus, this monograph aims to bring together research in which video games or mobile applications are used as a tool to produce beneficial changes for health (mental health, psychological state, body composition, among others). The lack of research in which video games, esports or mobile applications have been used from a healthy point of view is a gap that currently exists in the scientific literature. The use of gamified mobile applications (e.g. Pokémon Go) has shown beneficial results in increasing physical activity in different populations, positively impacting their body composition and mental state. In the educational field, initial

research has also shown that video games, esports and even mobile applications can be a very useful resource for teachers.

### **Determinants of Achievement in Top Sport**

Matej Maksimiljan Tusak 2026-03-05 Success in competitive sports depends primarily on athletes' skills, personality, and motivation. Many studies have investigated the determinants of success. The presence of the "zeitgeist" social cognitive perspective in psychology has shifted the focus to motivation in top sports. Social cognitive approaches have become the primary framework for researching almost everything in psychology. Despite extensive discussion and research on the relationship between motivation and personality characteristics, there is still a lack of evidence connecting psychological preparation, pre-competitive states, and psychological techniques to sports success and efficiency. There is still a gap in determining which psychological approaches and mental techniques contribute to success in top sports. Different regression models are expected to explore the determinants of success by comparing males and females, as well as young athletes versus top athletes. The final formula for success is still undefined regarding the importance of pre-competitive states, psychological preparation, technical skills, and knowledge. Techniques of psychological preparation such as hypnosis, visualization, or cognitive stress coping techniques are not clearly defined and discussed. Therefore, addressing this gap is crucial. The following goals should be discussed:

- Psychological factors contributing to success in top sports;
- motivational variables contributing to success in top sports;
-

personality structures contributing to top achievements; • stress and coping strategies in top sports; • the use of psychological preparation and its relation to top achievement in sports; • evidence-based research on specific psychological preparation techniques and their effectiveness in helping athletes achieve top performances; • pre-competition states and their relation to success in top sports; • differences in psychological characteristics contributing to top achievements between males and females, and between youth athletes and top athletes; • important factors in the development of motivation for success in athletes; • ethics and strategies to emphasize fair play in top sports; • the era of COVID-19 and its relationship to success in top sports, including correlation with specific psychological factors; Researchers are invited to submit original research to contribute to this topic. We also welcome brief research reports, systematic reviews, and meta-analyses, reviews, and theoretical articles. By understanding the factors contributing to success in top athletes, we can develop strategies to improve their results and effectiveness.
