Being Digital Nicholas Negroponte 1996-01-03 NATIONAL BESTSELLER

• "Succinct and readable.... If you suffer from digital anxiety ... here is a book that lays it all out for you." --Newsday In lively, mordantly witty prose, Negroponte decodes the mysteries--and debunks the hype--surrounding bandwidth, multimedia, virtual reality, and the Internet, and explains why such touted innovations as the fax and the CD-ROM are likely to go the way of the BetaMax.

Challenges to the Apparently Emerging Digital Democracy in

India Francis Thummy 2025-10-29 Research Paper (postgraduate) from the year 2022 in the subject Political Science, , language: English, abstract: India is the largest democracy in the world. Since Independence from Great Britain in 1947, political democracy has taken deep roots thanks to the visionary leaders of the immediate post-independent India. The Indian General Elections involving more than 815 million voters is seen as the greatest democratic exercise in the world. The Indian media have been playing a great role in stabilizing the democratic ethos of the country. In the recent years India too has been a witness to the digital media - 500 million is the number of internet users in 2017. There has been the general assumption that a society drenched in information in a digital age is inherently a democratic one. It was thought that the internet will be an unprecedented democratizing force, a place where all can be heard and everyone can participate equally. This

has been the big hope for Indian democracy too. This paper would like to argue that the hope of an emerging digital democracy in India has been belied due to the following factors, among many others: 1) the digital divide is too great to even speak of a digital democracy in India; the internet in fact reflects and amplifies real-world inequalities; 2) a medium with the capacity to empower people has been turned in to a tool of social control; the internet has reinforced the power structures of the real world - not empowered them; 3) capitalism's colonization of the internet has made the internet an unparalleled apparatus for government and corporate surveillance; a handful of giants - Airtel, Amazon, Google, Facebook, Jio, Reliance, Vodafone, often in collusion with the powers that be, remain the gatekeepers.

Architectural Intelligence Molly Wright Steenson 2022-11-01

Architects who engaged with cybernetics, artificial intelligence, and other technologies poured the foundation for digital interactivity. In Architectural Intelligence, Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work. Christopher Alexander, Richard Saul Wurman, Cedric Price, and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies—including cybernetics and artificial intelligence—into their work and influenced digital design practices from the late 1980s to the present day. Alexander, long before his famous 1977 book A Pattern Language, used computation and structure to visualize design problems; Wurman popularized the notion of “information architecture”; Price designed some of the first intelligent buildings; and Negroponte experimented with the ways people experience artificial intelligence, even at architectural scale. Steenson investigates how these architects pushed the boundaries of architecture—and how their technological experiments pushed the boundaries of technology. What did computational, cybernetic, and artificial intelligence researchers have to gain by engaging with architects and architectural problems? And what was this new space that emerged within these collaborations? At times, Steenson writes, the architects in this book characterized themselves as anti-architects and their work as anti-architecture. The projects Steenson examines mostly did not result in constructed buildings, but rather in design processes and tools, computer programs, interfaces, digital environments. Alexander, Wurman, Price, and Negroponte laid the foundation for many of our contemporary interactive practices, from information architecture to interaction design, from machine learning to smart cities.

Intelligent Software Agents Walter Brenner 2012-12-06 2 chapter contains examples of intelligent agents, arranged according to their application areas. Chapter 7 closes with a prospective view of the future development of intelligent agents. Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is developing faster. The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow, traditional medium like a book. One thing is sure today: when the book appears on the market, new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect. Why, despite this, does it make sense to write a classical book on this subject? Is there an alternative? Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue to prefer books and articles in periodicals rather than electronic sources such as the Internet. Or is there some other reason for the enormous success of Nicolas Negroponte's book Being Digital, which we thank for multimedia and many concepts of the digital and networked world, and even intelligent agents? Today, a book is still the only way to establish a new area.

Perspectives on Argument with APA Guidelines Nancy V. Wood 2002-06 For freshman/sophomore-level writing courses that teach argumentation. This combination rhetoric/reader helps students develop strategies for critical reading, critical thinking, research, and writing that will help them argue clearly and convincingly. It teaches them to identify and develop arguments, to read and form reactions and opinions of their own, to analyze an audience, to seek common ground, and to use

a wide, realistic range of techniques to write argument papers that express their individual views and original perspectives on modern issues. The Rhetoric portion includes clear explanations and examples of argument theory and reading and writing processes, research and documentation skills, and offers engaging, class-tested writing assignments and activities. The Reader portion includes 75 reading selections covering seven broad issue areas and 18 more focused areas, all of contemporary concern. Unique chapters discuss student argument styles, Rogerian argument, and argument and literature.

New Literacies Colin Lankshear 2003 "Lankshear and Knobel's *New Literacies: Changing Knowledge and Classroom Learning* is a savvy and principled analysis of emerging socio-cultural conditions of digitization, the best take to date on education, Post-Lyotard." - Suzanne de Castell, Professor, Literacy and New Media Studies, Simon Fraser University "An intriguing book which argues why the use of new media is transforming ways of knowing and making meaning in the digital age. Essential reading for anyone who cares about literacy education." - Associate Professor Ilana Snyder, Monash University "A good book opens a window onto new vistas; an excellent one, on the other hand, pulls readers through the opening and beyond, inviting critical dialogue at every turn. *New Literacies* belongs in the excellent category." - Donna Alvermann, University of Georgia Literacy education continues to be dominated by a mindset that has passed its use-by date. Education has failed to take account of how much the world has changed during the information technology revolution. It proceeds as though the world is the same as before - just somewhat more technologised. This is the hallmark of an 'outsider' mindset. In fact, qualitatively new literacies and new kinds of knowledge associated with digitally saturated social practices abound. 'Insiders' understand this, 'outsiders' do not. Yet 'outsider' perspectives still dominate educational directions. Meanwhile, student 'insiders' endure learning experiences that mystify, bemuse, alienate and miseducate them. This book describes new social practices and new literacies, along with kinds of knowledge associated with them. It shows what is at stake between 'outsider' and 'insider' mindsets, argues that education requires a shift in mindset, and suggests how and where pursuit of progressive change might begin.
