American Literature and American Identity Patrick Colm Hogan 2021-11-10 In recent years, cognitive and affective science have become increasingly important for interpretation and explanation in the social sciences and humanities. However, little of this work has addressed American literature, and virtually none has treated national identity formation in influential works since the Civil War. In this book, Hogan develops his earlier cognitive and affective analyses of national identity, further exploring the ways in which such identity is integrated with cross-culturally recurring patterns in story structure. Hogan examines how authors imagined American identity—understood as universal, democratic egalitarianism—in the face of the nation’s clear and often

brutal inequalities of race, sex, and sexuality, exploring the complex and often ambivalent treatment of American identity in works by Charlotte Perkins Gilman, Eugene O’Neill, Lillian Hellman, Djuna Barnes, Amiri Baraka, Margaret Atwood, N. Scott Momaday, Spike Lee, Leslie Marmon Silko, Tony Kushner, and Heidi Schreck.

Indian Country Today 2005
Learning to Predict and Predicting to Learn Thomas DeVere Wolsey 2009 Featuring practical instructional routines that are clearly linked to cognitive strategies students need to make sense of text, this book combines a rationale written from the perspective of current research that supports the use of the strategy or instructional routine with clear step-by-step directions and multiple examples from the classroom experiences of teachers across the United States. These experiences appear as boxed features that are easily identifiable by the reader. The text is written in such a way that readers may

start on page one and work through the end of the book or use the book as a reference for their own practice or as an inservice tool. Each cognitive strategy is linked via convenient matrices to the instructional routines that promote precision thinking on the part of students. Features: Differentiation between cognitive strategies for students and instructional routines teachers might use. Provides teachers and preservice teachers with a means to think about the tools they use to promote cognitive proficiency on the part of students. Often, strategies are used a catch-all term that does not clarify the difference between what teachers do and how students incorporate learn from those routines. Boxed features: Real teachers' explain how they have used the tools discussed in the book. Provides teachers with examples to which they may be able to relate. Instead of an isolated example, the voices of classroom teachers will explain how they have implemented

instructional routines or promoted cognitive strategies for their students. Sound rationale coupled with step-by-step procedures. Teachers often like to know what works, but many texts ignore their need and desire to know why a strategy or routine works. This text links rationale with tools so that readers will be able to explain why they are using a routine or assisting students to use cognitive tools to understand how they might think more precisely about the books they read. Theme: Prediction. Prediction is a popular request teachers make of their students, but often teachers lack sufficient experience or rationale to know how students might use prediction to increase precision in thinking about books and other texts they read. Approach: Combination of both theoretical and research with useful tools students and teachers can implement tomorrow. Many books take either a theoretical approach with little classroom application provided or a

practical approach that does not help teachers understand why a given tool is useful and under what circumstances. This book combines the best of both approaches to help teacher-readers understand why a strategy or routine is worth the instructional time that might be devoted to it. *Opening Doors* Joe Cortina 1995 This text presents a systematic way of approaching college textbook material that is designed to make students more efficient in their reading and studying. It reinforces the essential skills of identifying the topic, main idea and supporting details, and also provides strategies for important skills, ranging from predicting and questioning actively as you read, to selecting, organizing and rehearsing textbook material for a test.

Becoming a Master Student

David B. Ellis 1995 The best-selling text for the student success, study skills, or college survival skills course is

founded on the principle that the people most responsible for an excellent education and student success are students themselves. Expanded and updated coverage of technology includes new articles on distance learning and "netiquette"; web-based exercises linking the text to an accompanying Web site; and abundant Internet resources in the text with updates on the Web site. An Internet icon highlights these features throughout the text. Broader inclusion of diversity issues offers practical strategies for communicating across culture gaps and resolving conflict with people from other cultures. Stronger emphasis on careers includes advice on transferring academic success to job success and applying knowledge of learning styles to work projects. growing national concern about education centers on the paramount importance of teaching reading and writing. This volume offers a rigorous examination of reading and the pedagogy of reading critically. The book examines the crucial role of reading in the education of the child for the year 2000 and explores the history of reading and readers in America while surveying the attendant literacy debates. The author examines the historical progress of American reading instruction, demonstrating that how one is taught to read not only determines what one will read, but also what is permissible to read, and how pedagogies of reading define reading publics. An important chapter focuses on reading as a process of identity construction that creates not only a text but shapes the person who reads that text. The book also describes reading as a psychological process in which the creative act of manipulating the text produces the self and the world. A final chapter discusses reading as

the center of the educational system and examines methodologies. An index is provided.
