2011-06-22 This Three-Volume-Set constitutes the refereed proceedings of the Second International Conference on Software Engineering and Computer Systems, ICSECS 2011, held in Kuantan, Malaysia, in June 2011. The 190 revised full papers presented together with invited papers in the three volumes were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on software engineering; network; bioinformatics and e-health; biometrics technologies; Web engineering; neural network;

parallel and distributed e-learning; ontology; image processing; information and data management; engineering; software security; graphics and multimedia; databases; algorithms; signal processing; software design/testing; e-technology; ad hoc networks; social networks; software process modeling; miscellaneous topics in software engineering and computer systems.

IBM FileNet Content Manager Implementation Best Practices and Recommendations

Fay Chuck 2013-06-07
IBM® FileNet® Content Manager Version 5.2 provides full content lifecycle and extensive document management capabilities for digital content. IBM FileNet Content Manager is tightly integrated with the family of IBM FileNet products based on the IBM FileNet P8 technical platform. IBM FileNet Content Manager serves

as the core content management, security management, and storage management engine for the products. This IBM Redbooks® publication covers the implementation best practices and recommendations for solutions that use IBM FileNet Content Manager. It introduces the functions and features of IBM FileNet Content Manager, common use cases of the product, and a design methodology that provides implementation guidance from requirements analysis through production use of the solution. We address administrative topics of an IBM FileNet Content Manager solution, including deployment, system administration and maintenance, and troubleshooting. Implementation topics include system architecture design with various options for scaling an IBM FileNet Content Manager system, capacity planning, and design of repository design logical structure, security practices, and application design. An important implementation topic is business continuity. We

define business continuity, high availability, and disaster recovery concepts and describe options for those when implementing IBM FileNet Content Manager solutions. Many solutions are essentially a combination of information input (ingestion), storage, information processing, and presentation and delivery. We discuss some solution building blocks that designers can combine to build an IBM FileNet Content Manager solution. This book is intended to be used in conjunction with product manuals and online help to provide guidance to architects and designers about implementing IBM FileNet Content Manager solutions. Many of the features and practices described in the book also apply to previous versions of IBM FileNet Content Manager.

Computational Intelligence in Industry 4.0 and 5.0 Applications JOSEPH BAMIDELE
AWOTUNDE 2025-02-06 Industry 4.0 and 5.0 applications will revolutionize production, enabling smart manufacturing machines to

interact with their environments. These machines will become self-aware, self-learning, and capable of real-time data interpretation for self-diagnosis and prevention of production issues. They will also self-calibrate and prioritize tasks to enhance production quality and efficiency. Computational Intelligence in Industry 4.0 and 5.0 Applications examines applications that merge three key disciplines: computational intelligence (CI), Industry 4.0, and Industry 5.0. It presents solutions using Industrial Internet of Things (IIoT) technologies, augmented by CI-based techniques, modeling, controls, estimations, applications, systems, and future scopes. These applications use data from smart sensors, processed through enhanced CI methods, to make smart automation more effective. Industry 4.0 integrates data and intelligent automation into manufacturing, using technologies like CI, the IoT, the IIoT, and cloud computing. It transforms data into actionable insights for decision-making and process

optimization, essential for modern competitive businesses managing high-speed data integration in production processes. Currently, Industries 4.0 and 5.0 are undergoing significant transformations due to advances in applying artificial intelligence (AI), big data analytics, telecommunication technologies, and control theory. These applications are increasingly multidisciplinary, integrating mechanical, control, and information technologies. However, they face such technical challenges as parametric uncertainties, external disturbances, sensor noise, and mechanical failures. To address these, this book examines such CI technologies as fuzzy logic, neural networks, and reinforcement learning and their application to modeling, control, and estimation. It also covers recent advancements in IIoT sensors, microcontrollers, and big data analytics that further enhance CI-based solutions in Industry 4.0 and 5.0 systems.

Cracking the IT Architect Interview Sameer

Paradkar 2016-11-30 The ultimate guide to successful interviews for Enterprise, Business, Domain, Solution, and Technical Architect roles as well as IT Advisory Consultant and Software Designer roles Key Features [*] Learn about Enterprise Architects IT strategy and NFR - this book provides you with methodologies, best practices, and frameworks to ace your interview [*] A holistic view of key architectural skills and competencies with 500+ questions that cover 12 domains [*] 100+ diagrams depicting scenarios, models, and methodologies designed to help you prepare for your interview Book DescriptionAn architect attends multiple interviews for jobs or projects during the course of his or her career. Collaborative Working in Construction Dino Bouchlaghem 2012-06-25 Complications arising

from poor collaboration are the source of a variety of the construction industry's biggest problems. It is now widely recognized that an effective collaboration strategy based on the implementation of information systems and careful consideration of the wider organizational issues is key to delivering construction projects successfully. Against a backdrop of rapidly developing communication technologies, and continuing efforts to improve working practices, this book provides clear explanations of how to successfully devise and implement a collaboration strategy. The concepts introduced include: collaborative working as a holistic concept in construction a new framework on how to plan and implement effective collaboration change management approaches for introducing collaborative working systems, and implementing new technologies in construction projects. Examinations of emerging technologies like mobile and wireless are combined with overviews of relevant

management theories, and industry case studies, to provide a comprehensive guide suitable for both practitioners and students. Underpinned by research carried out by leading academics in co-operation with practitioners using the latest technologies, this is the most up-to-date and relevant guide to this crucial subject available. This is essential reading for all practitioners and serious students of management in the built environment.

Enterprise Architecture and Planning

Framework presents multi-faceted methods,

tools, and examples within a framework to help

transit agencies successfully implement

technologies. The report describes the connections between a transit agency's business and the technology, assists with building the business case for specific investments, highlights different financing options, provides guidance on an enterprise-wide approach to create more efficient and effective system deployments, and provides a method to show the benefits of a technology investment. The report provides a framework that incorporates five systems management disciplines: Enterprise Architecture Planning, Business Case Methodology, Systems Engineering, Financial Implementation Methods, and Post-Implementation Assessment. The declining costs of communications, data storage, and data retrieval are accelerating the opportunities spawned by the Internet and other information and communications technologies. Choosing and sequencing investments in technologies, processes, and people to reduce costs and increase productivity present challenges to the

transit manager, who must weigh the costs, benefits, and risks of changing the ways services are delivered. To assist in meeting such challenges, the TCRP Report 84: e-Transit: Electronic Business Strategies for Public Transportation series documents principles, techniques, and strategies that are used in electronic business for public transportation.
