The Twelfth Off-Campus Library Services
Conference Proceedings Julie A. Garrison 2006

The Twelfth Off-Campus Library Services Proceedings is a selection of superb presentations from the twelfth annual conference on library services held in Savannah, Georgia in April 2006. Respected experts tackle the latest issues in library services, distance learning, and administration, focusing on theory, best practices, and practical digital applications using the most current research available at the time of the conference. Case studies provide a clear view of the challenges present in various types of campus libraries, and practical strategies are offered to more fully utilize electronic resources in the future.

Electronic Book 2000 Victor McCrary 2000

A Dictionary of Computer Science Andrew Butterfield 2016-01-28 Previously named A Dictionary of Computing, this bestselling dictionary has been renamed A Dictionary of Computer Science, and fully revised by a team of computer specialists, making it the most up-to-date and authoritative guide to computing available. Containing over 6,500 entries and with expanded coverage of multimedia, computer applications, networking, and personal computer science, it is a comprehensive reference work encompassing all aspects of the subject and is as valuable for home and office users as it is indispensable for students of computer science. Terms are defined in a jargon-free and concise manner with helpful examples where relevant. The dictionary contains approximately 150 new entries including cloud computing, cross-site scripting, iPad, semantic attack, smartphone, and virtual learning environment. Recommended web links for many entries, accessible via the Dictionary of Computer Science companion website, provide valuable further information and the appendices include useful resources such as generic domain names, file extensions, and the Greek alphabet. This dictionary is suitable for anyone who uses

computers, and is ideal for students of computer science and the related fields of IT, maths, physics, media communications, electronic engineering, and natural sciences.

Libraries Without Walls 6 Peter Brophy 2006

This edited collection is drawn from the sixth Libraries Without Walls Conference, held in 2005. From their beginnings in 1995, the Libraries Without Walls conferences have mapped a major change in the practice of librarianship. While library services are still concerned to provide users with physical access to their buildings, electronic access, often from remote locations, is becoming ever more dominant. Papers presented at previous LWW conferences have provided examples of how libraries are pushing out the frontiers of their services. In 2005 a different approach was taken. The question was asked, 'How do we know whether these new services are having a positive impact on our users?' In response, papers written by leading professionals worldwide followed these broad themes: theoretical approaches to the evaluation of the new services, with an emphasis on qualitative methods the user experience: what do we know about the users of these services? assessment of the usability, including the accessibility, of the services measuring the outcomes and impact. Readership: These state-of-the-art papers will enable library managers and information professionals in all sectors to keep abreast of the latest developments in this vital area. The book will also assist educational specialists and course developers in increasing their understanding of the role and importance of information in the learning process.

Information Resources in the Humanities

and the Arts Anna H. Perrault Ph.D. 2012-12-10

This familiar guide to information resources in the humanities and the arts, organized by subjects and emphasizing electronic resources, enables librarians, teachers, and students to quickly find the best resources for their diverse needs. Authoritative, trusted, and timely, *Information Resources in the Humanities and the Arts: Sixth Edition* introduces new librarians to the breadth of humanities collections, experienced librarians to the nature of humanities scholarship, and the scholars themselves to a wealth of information they might otherwise have missed. This new version of a classic resource—the first update in over a decade—has been refreshed to account for the myriad of digital resources that have rewritten the rules of the reference and research world, and been expanded to include significantly increased coverage of world literature and languages. This book is invaluable for a wide variety of users: librarians in academic, public, school, and special library settings; researchers in religion, philosophy, literature, and the performing and visual arts; graduate students in library and information science; and teachers and students in humanities, the arts, and interdisciplinary degree programs.

A Dictionary of Computing Oxford University Press 2004 Searchable dictionary database of computer terminology, covering computer applications in industry, the office, science, education, and the home, the hardware, software, and telecommunications behind these applications.

The New Walford Guide to Reference Resources Ray Lester 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources

as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that The New Walford is clear, easy-to-use and intuitive. - Publisher.

Scholarly Digital Editions as Interfaces Roman Bleier 2018-11-15 Interfaces are important elements of digital scholarly editions as they allow and direct the interaction of users with the online content and they facilitate the access to and exchange of data and information. Some interfaces are created for the human user (GUI), others for machine interaction and data exchange (API). Both aspects of interfaces and their roles in digital scholarly editing were discussed at a conference in 2016 organised by the Centre for Information Modelling at the University of Graz and the Digital Scholarly Editions Initial Training Network DiXiT. This volume includes a range of papers presented at the conference that highlight the diverse views and approaches towards interfaces in the digital scholarly editing community.

Guide to Reference in Medicine and Health Denise Beaubien Bennett 2014-04-26 Drawn from the extensive database of Guide to Reference, this up-to-date resource provides an annotated list of print and electronic biomedical and health-related reference sources, including internet resources and digital image collections.
