What is a Differential Equation

A differential equation is any equation of some unknown function that involves some derivative of the unknown function. Classical example is Newton's law of motion. The ... Know the definition of a differential equation. Know our first and second most important equations and their solutions. Be able to derive the differential equation modeling a physical or geometric situation. ... Theorem 1 (Superposition Principle). Let $y_1, y_2 : (a, b) \rightarrow \mathbb{R}$ be two solutions of the homogeneous equation (10). Then for any two real numbers α and β the function $y_3(x) = \alpha y_1(x) + \beta y_2(x)$ is again a ... Differential equations arise in a variety of subject areas, including not only the physical sciences but also such diverse fields as economics, medicine, psychology, and operations research. Overview: The language of differential

forms puts all the theorems of this Chapter along with several earlier topics in a handy single framework. The introduction here is brief. This handout will serve as an introduction to differential equations and will cover topics including identifying differential equations, solving first-order equations, verifying solutions to differential ... Introduced here are notation, definitions and background results suitable for use in differential equations.
