Analytical Design Methods for

Aircraft Structural Joints W. F.

McCombs 1968 An engineering

procedure for determining the

distribution of loads in the

mechanically fastened joints of

splice and doubler installations

has been developed. Methods

for both hand analyses and

computer analyses are

presented. Routines for solution by digital computer are provided. The methods are generally limited to the cases of a single lap arrangement and a single sandwich arrangement, but the cases of multiple (stacked) members is discussed. The members may have any form of taper or steps and the effects of fastener-hole clearance, or 'slop', and plasticity can be accounted for.
