Malaysia's Development

Challenges Hal Hill 2013-07-03

This book examines the various economic, political and developmental policy challenges that Malaysia faces in her shift from a middle income to high-income economy. This issue is of great interest to academics, policy makers and development practitioners in the developing world, particularly in middle-income economies where there is a widespread concern about the challenges of managing such a transition. Malaysia is one of the developing world's greatest success stories. The book argues that as one of the developing world's most open economies, with a reputation for prudent macroeconomic management, Malaysia has achieved consistent growth since independence. It has moved from a largely resource-

based economy to a multinational-led, export-oriented, industrial economy. Despite this success, Malaysia, like other developing countries, is currently at a crossroads in its development strategy; it is in danger of being unable to graduate to the level of more advanced economies - such as Korea, Taiwan and Singapore - but with the basis of its success at risk from competition from efficient, lower-wage countries - such as China, India and Vietnam. Moreover, there are new threats to the political stability and affirmative action programmes which have successfully held together a very racially diverse population.

Countercyclical Capital Buffers Mathias Drehmann 2010 This paper provides some general lessons for the design of countercyclical capital buffers. Its main empirical contribution is to analyse conditioning variables which could guide the build-up and release of capital. A major distinction for countercyclical capital schemes is whether conditioning variables are bank-specific or system-wide. The evidence presented in the paper indicates that the idiosyncratic component can be sizeable when a bank-specific approach is used. This makes a system-wide approach preferable, for which the best variables as signal for the pace and size of the accumulation of the buffers are not necessarily the best for the timing and intensity of the release. The credit-to-GDP ratio seems best for the build-up phase. Some measure of aggregate losses, possibly combined with indicators of credit conditions, seem to perform well for

signalling the beginning of the release phase. Nonetheless, the analysis indicates that designing a fully rule-based mechanism may not be possible at this stage as some degree of judgment seems inevitable. A parallel exercise indicates that reducing the sensitivity of the minimum capital requirement is an important element of a credible countercyclical buffer scheme.

Climate Politics And The Climate Movement In Australia
Verity Burgmann 2012-08-01
Climate change is the hottest topic of the twenty-first century and the climate movement a significant global social movement. This book examines the broad context of Australian climate politics and the place of the climate movement within it. Acting 'from above' are the most powerful forces—corporations and governments, both Labor and Coalition—with the media framing the issues. Climate movement actors 'in the middle' include the Australian Greens, major environmental and climate organisations,

think-tanks, academics, public intellectuals and the union movement. Acting 'from below' are the numerous local climate action groups and various regional and national networks. This lowest level is the primary location of the climate movement; and grassroots mobilisation the source of its vitality. To advocate a safe climate and climate justice, the book ends by offering a vision for an alternative Australia based upon the principles of social equity and environmental sustainability.
