Recalibrating U.S. Strategy toward Russia

Kathleen H. Hicks 2017-04-12 These are turbulent times for American foreign policy. Nowhere are the challenges facing the United States more evident than in U.S. policy toward Russia. Drawing on scholars across several disciplines and perspectives, CSIS conducted a year-long study that sought to achieve two goals. First, to provide policymakers with a clearer understanding of Russia's strategic motivations and objectives, along with the tools it uses to advance its goals. Second, to lay out a comprehensive strategy to secure U.S. and transatlantic interests in the face of the complex Russia challenge set.

The Oxford Guide to International

Humanitarian Law Ben Saul 2020-05-07

International humanitarian law is the law that governs the conduct of participants during armed conflict. This branch of law aims to regulate the means and methods of warfare as well as to provide protections to those who do not, or who no longer, take part in the hostilities. It is one of the oldest branches of international law and one of enduring relevance today. The Oxford Guide to International Humanitarian Law provides a practical yet sophisticated overview of this important area of law. Written by a stellar line up of contributors, drawn from those who not only have extensive practical experience but who are also regarded as leading scholars of the subject, the text offers a comprehensive and authoritative exposition of the field. The Guide provides professionals and advanced students with information and analysis of sufficient depth to enable them to perform their tasks with understanding and confidence. Each chapter illuminates how the law applies in practice, but does not shy away from the important conceptual issues that underpin how the law has developed. It will serve as a first port of call and a regular reference work for those interested in international humanitarian law.

F & S Index United States Annual 1995

Electronic Warfare United States. Government Accountability Office 2012 The Department of

Defense (DOD) developed an electronic warfare strategy, but it only partially addressed key characteristics that GAO identified in prior work as desirable for a national or defense strategy. The National Defense Authorization Act for Fiscal Year 2010 requires DOD to submit to the congressional defense committees an annual report on DOD's electronic warfare strategy for each of fiscal years 2011 through 2015. DOD issued its fiscal year 2011 and 2012 strategy reports to Congress in October 2010 and November 2011, respectively. GAO found that DOD's reports addressed two key characteristics: (1) purpose, scope, and methodology and (2) problem definition and risk assessment. However, DOD only partially addressed four other key characteristics of a strategy, including (1) resources, investments, and risk management and (2) organizational roles, responsibilities, and coordination. For example, the reports identified mechanisms that could foster coordination across the department and identified some investment areas, but did not fully identify implementing parties, delineate roles and responsibilities for managing electronic warfare across the department, or link resources and investments to key activities. Such characteristics can help shape policies, programs, priorities, resource allocation, and standards in a manner that is conducive to achieving intended results and can help ensure that the department is effectively managing electronic warfare.

Information Warfare and Electronic

Warfare Systems Richard A. Poisel 2013-06-01

Information warfare is emerging as the new war fighting paradigm of the U.S. and many of its allies. This book is the first in the field to address communication electronic warfare (EW) systems in the context of information warfare. Authored by a recognized leading authority, the book includes a unique formulation of EW system performance and presents results of system simulations that have not appeared previously in any related literature. Essential reading for EW engineers and researchers working in defense, aerospace, and military

capacities, the book explores the properties of information, the properties of information communication means, information theory, EW system architectures, and two operational simulations, one in Northeast Asia and the other in urban terrain.

Proceedings of the United States Naval Institute United States Naval Institute 2016-07

Marine Corps Aerial Electronic Warfare Into the Future 2003 "In future warfare, the

struggle for information will play a central role, taking the place, perhaps, of the struggle for geographical position held in previous conflicts. Information superiority is emerging as a newly recognized, and more intense, area of competition." In the struggle for information on the battlefield, control of the electromagnetic spectrum has proven to be of extreme importance in modern conflicts. As forces enter into battle with more technologically advanced weapons, the reliance on the electromagnetic spectrum will only increase. The United States

military, and the Marine Corps in particular, is lagging in developing its electronic warfare capability for the future. This choice may jeopardize its ability to control the electromagnetic spectrum in future conflicts. This negligence has caused the Marine Corps to fail to solidify a viable follow on platform to the aging EA-6B Prowler, which has been in service since 1979. Now that the EA-6B is approaching the end of its service life, the Air Force and the Navy have both made announcements regarding the direction in which their EW programs are heading. The Navy has decided to acquire an electronic attack version of the F/A-18 E/F Super Hornet, designated the EA-18G. The Air Force is moving toward a program consisting of multiple platforms. Being considered are B-52 and F-22 aircraft with jamming pods and unmanned aircraft, with the focus of effort being an electronic warfare variant of the X-45 Unmanned Combat Aerial Vehicles (UCAVs). The Marine Corps intends to fly the Prowler until 2015. There are several options to replace the aging fleet of Prowlers. As already mentioned, the X-45 UCAV and the EA-18G are possibilities currently in different stages of development. Another option for the Marine Corps may be an electronic attack (EA) variant of the Joint Strike Fighter (JSF). Each replacement option has different advantages and disadvantages.

Travellers, Merchants and Settlers in the Eastern Mediterranean, 11th-14th Centuries David Jacoby 2023-05-31 This collection of studies (the eighth by David Jacoby) covers a period witnessing intensive geographic mobility across the Mediterranean, illustrated by a growing number of Westerners engaging in pilgrimage, crusade, trading and shipping, or else driven by sheer curiosity. This movement also generated western settlement in the eastern Mediterranean region. A complex encounter of Westerners with eastern Christians and the Muslim world occurred in crusader Acre, the focus of two papers; a major emporium, it was also the scene of fierce rivalry between the Italian maritime powers. The fall of the crusader states in 1291 put an end to western mobility in the Levant and required a restructuring of trade in the region. The next five studies show how economic incentives promoted western settlement in the Byzantine provinces conquered

by western forces during the Fourth Crusade and soon after. Venice fulfilled a major function in Latin Constantinople from 1204 to 1261. The city's progressive economic recovery in that period paved the way for its role as transit station furthering western trade and colonization in the Black Sea region. Venice had also a major impact on demographic and economic developments in Euboea, located along the maritime route connecting Italy to Constantinople. On the other hand, military factors drove an army of western mercenaries to establish in central Greece a Catalan state, which survived from 1311 to the 1380s.

Asia-Pacific Rebalance 2025 Michael Green 2016-02-04 In 2015, Congress tasked the Department of Defense to commission an independent assessment of U.S. military strategy and force posture in the Asia-Pacific, as well as that of U.S. allies and partners, over the next decade. This CSIS study fulfills that congressional requirement. The authors assess U.S. progress to date and recommend initiatives necessary to protect U.S. interests in the Pacific Command area of responsibility through 2025. Four lines of effort are highlighted: (1) Washington needs to continue aligning Asia strategy within the U.S. government and with allies and partners; (2) U.S. leaders should accelerate efforts to strengthen ally and partner capability, capacity, resilience, and interoperability; (3) the United States should sustain and expand U.S. military presence in the Asia-Pacific region; and (4) the United States should accelerate development of innovative capabilities and concepts for U.S. forces.

War in the Fourth Dimension Alfred Price 2001 War in the Fourth Dimension provides valuable insight into the long-running intelligence battle to collect detailed information on unfriendly nations' electronic systems, the development of radar stealth techniques, the effect of computer technology on countermeasures systems, the evolution of information warfare and a review of likely developments in electronic warfare systems in the future. This book gives the clearest possible account of these new technologies in modern warfare and how they affect the outcome of battles.

Practical Geolocation for Electronic Warfare Using MATLAB Nicholas O'Donoghue 2022-06-30 This text explores the practical realities that arise from the employment of geolocation for electronic warfare in real-world systems, including position of the target, errors in sensor position, orientation, or velocity, and the impact of repeated measurements over time. The problems solved in the book have direct relevance to accurately locating and tracking UAVs, planes, and ships. As a companion volume to the author's previous book *Emitter Detection and Geolocation for Electronic Warfare* (Artech House, 2019), this book goes in depth on real-world complications that include: working within and converting between different coordinate systems, incorporation of prior information about targets, sensor uncertainties, the use of multiple snapshots over time, and estimating the current position and velocity of moving targets. The e-book version described here includes several links to software and videos that can be downloaded from the publicly available Git repository. The book also includes all MATLAB code necessary to develop novel algorithms that allow comparisons to classical techniques and enable you to account for errors in timing, position, velocity, or orientation of the sensors. With its unique and updated coverage of detailed geolocation techniques and data, and easy linkable access to additional software and

videos, this is a must-have book for engineers and electronic warfare practitioners who need the best information available on the development or employment of geolocation algorithms. It is also a useful teaching resource for faculty and students in engineering departments covering RF signal processing topics, as well as anyone interested in novel applications of SDR's and UAVs.
