

Femtocells Design Application

Smart Things and Femtocells Fadi Al-Turjman 2018-07-03 This book provides a comprehensive overview for the use of femtocells in smart Internet of Things (IoT) environments. Femtocells will help mobile operators to provide a basis for the next generation of services which are a combination of voice, video, and data services to mobile users. This book discusses modelling traffic and deployment strategies in femtocells and provides a review for the use of femtocells and their applications in IoT environments. Moreover, it highlights the efficient real-time medium access, data delivery, caching and security aspects in smart spaces. It concludes by presenting open research issues associated with smart IoT-femtocell based applications.

A Study of Multimedia Service Delivery in the Home for Femtocells Kelly Yedinak 2009 This thesis considers the case of Ubiquisys Ltd., a femtocell company, and the ability for its products to provide added services to users in the home. The findings include recommendations for software applications, application delivery, timing, and pricing. The actions that should be taken as a result of this study include a few things in both application architecture as well as long-term strategy. First, the femtocell needs to allow communication between the smartphone, the home network, and other smart devices. Secondly, the femtocell has no self-contained interface to the user, and thus will require platform specific applications sold through the smartphone OS or handset vendor. Lastly, Ubiquisys needs to decide on a strategy, including both place and timing, for rolling out services. Femtocell applications require femtocells, which in the next few years will only reach an installed base several orders of magnitude smaller than the smartphone. It is recommended that mobile advertising based free applications should be provided initially while slowly phasing in paid applications in 2011 and 2012. Through application of system architecture analysis and Design Structure Matrices (DSM) to the current and emerging

architectures, this paper provides a template for analyzing ecosystems for home cloud services and content delivery. This is achieved through an in depth analysis of two current product architectures. Information drawn from analysis of these systems is then used to make conclusions and recommendations about how a femtocell can provide the greatest value in the home.
