Joints hold the skeleton together and support movement. There are two ways to categorize joints. The first is by joint function, also referred to as range of motion. A tissue called the synovial membrane lines the joint and seals it into a joint capsule. The synovial membrane secretes a clear, sticky fluid (synovial fluid) around the joint to lubricate it. Oct 30, 2023 · Most of the upper and lower limb joints are synovial. The majority of the synovial joints are lined with hyaline cartilage, except for the temporomandibular joint which is lined with the fibrous ... Apr 17, 2026 · Joint, in humans and other animals, structure connecting two or more adjacent parts of the skeleton. Not all joints move, but, among those that do, motions include spinning, swinging, ... A joint is any place in your body where two bones meet. You have several types of joints that give your body structure and help you move. The connection between a tooth and the jawbone is also called a joint, and is described as a fibrous joint known as a gomphosis. Joints are classified both structurally and functionally. Learn the basics of joints in human anatomy, including joint classification, synovial structure and factors affecting joint stability. Designed for medical students and clinicians.
