Greenhouse Engineering V.P. Sethi 2025-08-19 The comprehensive software-based approach in this book provides an in-depth exploration of the latest innovations in greenhouse engineering, thus transforming the existing Controlled Environment Agriculture (CEA) to a futuristic Greenhouse Smart Agriculture (GSA), aiding the reader to optimize crop yields, reduce environmental impact, and enhance farm profitability through software decision support systems. From renewable energy solutions and software-driven sustainable practices to AI-powered optimization and integrated smart greenhouse design, it covers the entire spectrum of GSA, including practical knowledge, global case studies, and real-world examples. Key features: Explores innovative renewable energy solutions for Greenhouse Smart Agriculture Implements software-driven sustainable solutions for optimized crop yields and reduced environmental impact Develops innovative control strategies for Greenhouse Smart Agriculture using artificial intelligence, the Internet of Things, and advanced techniques Optimizes greenhouse production through modelling and simulation techniques for enhanced sustainability Designs and implements sustainable greenhouse climate control systems for heating, cooling, and energy efficiency Creates integrated smart greenhouse systems that combine automation, renewable energy, and sustainable design Harnesses the power of artificial intelligence, the Internet of Things, and data-driven approaches to enhance greenhouse optimization and sustainable agriculture Integrates smart soilless greenhouse agriculture and aquaponics using a design-to-software approach This book is aimed at university and greenhouse industry researchers, agricultural engineers, and graduate students in fields such as agriculture, agricultural and biosystems engineering, horticulture, environmental science, and renewable energy, as well as professional agricultural policymakers.

Achieving sustainable urban agriculture Prof Johannes S. C. Wiskerke 2020-02-18 Strong focus on infrastructural requirements for successful urban agriculture, such as public policy and planning frameworks, business models and social networks Covers developments in key technologies such as rooftop and vertical farming, as well as waste management Includes case studies of particular commodities, including horticultural produce, livestock and forestry

Constructed Ecologies Margaret Grose 2017-03-16 Today, designers are shifting the practice of landscape architecture towards the need for a more complex understanding of ecological science. Constructed Ecologies presents ecology as critical theory for design, and provides major ideas for design that are

supported with solid and imaginative science. In the questioning narrative of *Constructed Ecologies*, the author discards many old and tired theories in landscape architecture. With detailed documentation, she casts off the savannah theory, critiques the search for universals, reveals the needed role of designers in large-scale agriculture, abandons the overlay technique of McHarg, and introduces the ecological and urban health urgency of public night lighting. Margaret Grose presents wide-ranging new approaches and shows the importance of learning from science for design, of going beyond assumptions, of working in multiple rather than single issues, of disrupting linear design thinking, and of dealing with data. This book is written with a clear voice by an ecologist and landscape architect who has led design students into loving ecological science for the support it gives design.
