Advanced Database Systems Nabil R. Adam 1993 Database management is attracting wide interest in both academic and industrial contexts. New application areas such as CAD/CAM, geographic information systems, and multimedia are emerging. The needs of these application areas are far more complex than those of conventional business applications. The purpose of this book is to bring together a set of current research issues that addresses a broad spectrum of topics related to database systems and applications. The book is divided into four parts: - object-oriented databases, - temporal/historical database systems, - query processing in database systems, - heterogeneity, interoperability, open system architectures, multimedia database systems.

**Ergonomics and Human Factors** David Osborne 1995 Ergonomics (ergos - work; nomos - laws) and Human Factors have almost identical characteristics and identities and have both developed in similar ways, within the same period, and for the same reasons. The

Ergonomics philosophy is the amalgamation of information from psychology, physiology and engineering to enable the environment to be designed to 'fit' the person. Ergonomics and Human Factors evolved at around the time of World War II, when fighting and defensive machines were being built far beyond the capacities and capabilities of the operators. The selection of papers included in these volumes present a corpus of material to enable the reader to obtain an overview of the subject through the writings of significant authors and reviewers in the field. Four main aspects of the working situation and of the human operator within that situation have been taken into consideration when selecting the articles for these volumes; the physical characteristics of the operator's body when 'fitting' the system, the operator's cognitive abilities when interacting with the system, the social situation in which the system operates, and the environmental features that 'surround' the system.
