Protection of Weaker Parties in Smart Contracts

Andrea Stazi 2022 The development of distributed ledger technologies, primarily the blockchain, allows for the creation of so-called "smart contracts", characterised by the self-execution of contractual clauses without the need for human intervention, and generally excluding the possibility of interrupting such execution or modifying the content. In European contract law, standard contractual terms are subject to restrictions which also seem applicable to "smart contracts". The Directive 2011/83/EU on consumer rights provided for various rights and related information obligations, for the exercise and compliance of which, on the one hand, it is also necessary to use a text written in natural language. On the other hand, in current practice, one of the parties for a multitude of contracts usually does not draw up the contractual forms in advance. The suppliers of platforms for smart contracts prepare them. Therefore, the professional must verify that the information required by the consumer law is included in them, or integrate with the missing information. The specific method of drafting the computer code, then, may be relevant for the purposes of configuring various protection hypotheses provided for in the consumer law, and the possible exercise of the right of withdrawal. The Directives 2019/770 and 2019/771 on contracts for the supply of digital content and services and for the sale of goods in which such content and services are incorporated or interconnected, subjected the terms of "smart contracts" to a consistency with respect to what has been agreed and suitability for the use of the content or service provided. The "Omnibus" Directive 2019/2161 provided enhanced enforcement measures and increased transparency requirements, imposed additional obligations for B2C contracts and incorporated into the definition of digital goods and services - including the "free services" offered in exchange of personal data instead of money - in existing EU provisions. Increased transparency obligations for traders, including

information duties for online marketplaces concerning the identification of sellers and the algorithms used for search result rankings, could be difficult to fulfil in case of "smart contracts" which can be concluded and executed directly between parties that could be unknown, without platform intermediaries and automatically entering into a contract and executing it potentially without even caring who is the counterpart. Thus, the new framework of consumer protection extended to contracts regarding digital goods, content and services, could in fact be difficult to implement, or present specific peculiarities, for "smart contracts" via distributed ledger technologies.

Regulating Industrial Internet Through IPR, Data Protection and Competition Law Rosa Maria Ballardini 2019-08-28 The digitization of industrial processes has suddenly taken a great leap forward, with burgeoning applications in manufacturing, transportation and numerous other areas. Many stakeholders, however, are uncertain about the opportunities and risks associated with it and what it really means for businesses and national economies. Clarity of legal rules is now a pressing necessity. This book, the first to deal with legal questions related to Industrial Internet, follows a multidisciplinary approach that is instructed by law concerning intellectual property, data protection, competition, contracts and licensing, focusing on business, technology and policy-driven issues. Experts in various relevant fields of science and industry measure the legal tensions created by Industrial Internet in our global economy and propose solutions that are both theoretically valuable and concretely practical, identifying workable business models and practices based on both technical and legal knowledge. Perspectives include the following: regulating Industrial Internet via intellectual property rights (IPR); data ownership versus control over data; artificial intelligence and IPR infringement; patent owning in Industrial Internet; abuse of dominance in Industrial Internet platforms; data collaboration, pooling and hoarding; legal implications of granular

versioning technologies; and misuse of information for anticompetitive purposes. The book represents a record of a major collaborative project, held between 2016 and 2019 in Finland, involving a number of universities, technology firms and law firms. As Industrial Internet technologies are already being used in several businesses, it is of paramount importance for the global economy that legal, business and policy-related challenges are promptly analyzed and discussed. This crucially important book not only reveals the legal and policy-related issues that we soon will have to deal with but also facilitates the creation of legislation and policies that promote Industrial-Internet-related technologies and new business opportunities. It will be warmly welcomed by practitioners, patent and other IPR attorneys, innovation economists and companies operating in the Industrial Internet ecosystem, as well as by competition authorities and other policymakers.

Global Economic Challenges Nesrin Özataç 2023-03-08 This volume presents current developments in the fields of banking and finance from an international perspective. Featuring contributions from the 6th International Conference on Banking and Finance Perspectives (ICBFP), this volume serves as a valuable forum for discussing current issues and trends in the banking and financial sectors, especially in light of the global economic challenges triggered by financial institutions. Using the latest theoretical models, new perspectives are brought to topics such as international monetary policy, Islamic finance,

microfinance, fintech, and capital flight. Offering an opportunity to explore the challenges of a rapidly changing industry, this volume will be of interest to academics, policy makers, and scholars in the fields of banking, insurance, and finance.

Can Blockchain Solve the Hold-up Problem in Contracts? Richard Holden 2021-11-18 A vexing problem in contract law is modification. Two parties sign a contract but before they fully perform, they modify the contract. Should courts enforce the modified agreement? A private remedy is for the parties to write a contract that is robust to hold-up or that makes the facts relevant to modification verifiable. Provisions accomplishing these ends are renegotiation-design and revelation mechanisms. But implementing them requires commitment power. Conventional contract technologies to ensure commitment - liquidated damages - are disfavored by courts and themselves subject to renegotiation. Smart contracts written on blockchain ledgers offer a solution. We explain the basic economics and legal relevance of these technologies, and we argue that they can implement liquidated damages without courts. We address the hurdles courts may impose to use of smart contracts on blockchain and show that sophisticated parties' ex ante commitment to them may lead courts to allow their use as pre-commitment devices.

Implications of Blockchain-Based Smart Contracts on Contract Law Chantal Bompreszi 2021-11-24 This book provides an in-depth analysis of the main debates surrounding blockchain-based smart contracts and contract law. After having provided a detailed description of the technology, it considers existing rules concerning technology and contracts, from vending machines to computable contracts, and verifies its applicability to blockchain-based smart contracts. Namely, it focuses on the implications of blockchain-based smart contracts on contract formation, contract performance, and applicable law and jurisdiction.

Regulating Blockchain Philipp Hacker 2019-08-29 Less than a decade after the Financial Crisis, we are witnessing the fast emergence of a new financial order driven by three different, yet interconnected, dynamics: first, the rapid application of technology - such as big data, machine learning, and distributed computing - to banking, lending, and investing, in particular with the emergence of virtual currencies and digital finance; second, a disintermediation fuelled by the rise of peer-to-peer lending platforms and crowd investment which challenge the traditional banking model and may, over time, lead to a transformation of the way both retail and corporate customers bank; and, third, a tendency of de-bureaucratisation under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply. These changes are to a significant degree driven by the development of blockchain technology. The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges. The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance, as well as those that it will inevitably face (and is partially already facing, as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show) as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings. The book provides an unparalleled

critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation. *Digital Technologies and the Law of Obligations* Zvonimir Slakoper 2021-09-30 Digital Technologies and the Law of Obligations critically examines the emergence of new digital technologies and the challenges they pose to the traditional law of obligations, and discusses the extent to which existing contract and tort law rules and doctrines are equipped to meet these new challenges. This book covers various contract and tort law issues raised by emerging technologies - including distributed ledger technology, blockchain-based smart contracts, and artificial intelligence - as well as by the evolution of the internet into a participative web fuelled by user-generated content, and by the rise of the modern-day collaborative economy facilitated by digital technologies. Chapters address these topics from the perspective of both the common law and the civil law tradition. While mostly focused on the current state of affairs and recent debates and initiatives within the European Union regulatory framework, contributors also discuss the central themes from the perspective of the national law of obligations, examining the adaptability of existing legal doctrines to contemporary challenges, addressing the occasional legislative attempts to deal with the private law aspects of these challenges, and pointing to issues where legislative interventions would be most welcomed. Case studies are drawn from the United States, Singapore, and other parts of the common law world. *Digital Technologies and the Law of Obligations* will be of interest to legal scholars and researchers in the fields of contract law, tort law, and digital law, as well as to legal practitioners and members of law reform bodies. Mastering Ethereum Andreas M. Antonopoulos 2018-11-13 Ethereum represents the gateway to a worldwide, decentralized computing paradigm. This platform enables you to run decentralized applications (DApps) and smart contracts that have no central points of failure or control, integrate with a payment network, and operate on an open blockchain. With this practical guide, Andreas M. Antonopoulos and Gavin Wood provide everything you need to know about

building smart contracts and DApps on Ethereum and other virtual-machine blockchains. Discover why IBM, Microsoft, NASDAQ, and hundreds of other organizations are experimenting with Ethereum. This essential guide shows you how to develop the skills necessary to be an innovator in this growing and exciting new industry. Run an Ethereum client, create and transmit basic transactions, and program smart contracts Learn the essentials of public key cryptography, hashes, and digital signatures Understand how "wallets" hold digital keys that control funds and smart contracts Interact with Ethereum clients programmatically using JavaScript libraries and Remote Procedure Call interfaces Learn security best practices, design patterns, and anti-patterns with real-world examples Create tokens that represent assets, shares, votes, or access control rights Build decentralized applications using multiple peer-to-peer (P2P) components

Smart Contracts and Comparative Law Andrea Stazi 2021-12-08 The book analyzes the most relevant developments in the relation between contracts and technology, from automatically concluded contracts to today's revolutionary "smart contracts" developed through blockchain, which are beginning to and will increasingly disrupt many economic and social relations. First of all, the author offers a broad analysis of the peculiarities and evolution of the relation between contracts and technology. The main features and elements of electronic contracts are then examined in depth to highlight the specific rules applicable to them in the international comparative legal framework. In turn, the book provides a detailed explanation of the technology, economic and social dynamics, and legal issues concerning blockchain and smart contracts. The analysis focuses on the question of the legal nature of smart contracts, the issues posed by their development and the first legal solutions adopted in some countries. The comparative approach pursued makes it possible to focus attention on the first solutions adopted until now in various systems, with particular regard to the circulation of models and ideas and to the specificities of their local variations, in terms of e.g. applicable law and jurisdiction. In reviewing the characteristics of distributed ledger technologies, and in particular of the

blockchain technology on which smart contracts are based, above all the peculiarities of the latter are taken into consideration, especially automatic execution and resistance to tampering, which simultaneously present significant opportunities and complex legal issues. A comprehensive framework is then provided to reconcile smart contracts with comparative contract law, in order to define the scope and specificities of their binding force, legal effectiveness and regulation in various legal systems. Lastly, with specific reference to the elements, pathologies and contractual remedies for smart contracts, the book examines the peculiarities of their application and the main issues that emerge in comparative contract law in order to promote their harmonized use, in keeping with the transnational nature of such a revolutionary tool.

Blockchain and the Law Francisco Pereira Coutinho 2023-11-15 This book discusses the dogmatic (that what is settled) and the dynamic (that what is changing) aspects of the relationship between blockchain and the law from a critical perspective. With contributions from legal and financial experts involved in both academy and business from Europe, Africa and North and South America, the book looks at the abstract complexities and practical challenges of regulating blockchain technology and its developments, such as crypto assets and smart contracts, from the perspectives of financial, tax, civil, and international law. Moreover, the book also delves into some exciting and cutting-edge related topics such as blockchain applications for litigation, CBDC and elections. The volume offers insightful considerations that will be helpful for legal practitioners involved in the crypto and Distributed Ledger Technology (DLT) phenomenon. Francisco Pereira Coutinho is Associate Professor at the Nova School of Law in Lisbon, Portugal. Martinho Lucas Pires is Teaching Assistant in the Department of Law of the Universidade Católica Portuguesa in Lisbon, Portugal. Bernardo Correia Barradas is a Lawyer and Senior Legal Advisor in payments in Washington DC, United States.

Blockchains, Smart Contracts, Decentralised Autonomous Organisations and the Law Daniel Kraus 2019 The growth of Blockchain technology presents a number of

legal questions for lawyers, regulators and industry participants alike. Primarily, regulators must allow Blockchain technology to develop whilst also ensuring it is not being abused. This book addresses the challenges posed by various applications of Blockchain technology, such as cryptocurrencies, smart contracts and initial coin offerings, across different fields of law. Contributors explore whether the problems posed by Blockchain and its applications can be addressed within the present legal system or whether significant rethinking is required.

Law, Technology and Dispute Resolution Riikka Koulu 2018-09-24 The use of new information and communication technologies both inside the courts and in private online dispute resolution services is quickly changing everyday conflict management. However, the implications of the increasingly disruptive role of technology in dispute resolution remain largely undiscussed. In this book, assistant professor of law and digitalisation Riikka Koulu examines the multifaceted phenomenon of dispute resolution technology, focusing specifically on private enforcement, which modern technology enables on an unforeseen scale. The increase in private enforcement confounds legal structures and challenges the nation-state's monopoly on violence. And, in this respect, the author argues that the technology-driven privatisation of enforcement - from direct enforcement of e-commerce platforms to self-executing smart contracts in the blockchain - brings the ethics of law's coercive nature out into the open. This development constitutes a new, and dangerous, grey area of conflict management, which calls for transparency and public debate on the ethical implications of dispute resolution technology.

Smart Contracts and the Illusion of Automated Enforcement Danielle D'Onfro 2019 This symposium essay explores the barriers to deploying smart contracts in the consumer finance space: the humans themselves, existing consumer protection laws, and the other businesses who have financial contracts with consumers but that cannot deploy smart contracts. These three barriers render perfectly automated enforcement all but impossible. Nevertheless, there may be room for modifiable smart contracts in the consumer financial space

although these contracts may be only marginally more efficient than traditional contracts.

Innovation and the Transformation of Consumer Law Dan Wei 2020-11-27 This book covers technologies that pose new challenges for consumer policy, creative developments that can help protect consumers' economic interests, innovative approaches to addressing perennial consumer concerns, and the challenges entailed by emerging ways of creating and delivering consumer products and services. In addition, it reflects on past successes and failures of consumer law and policy, explores opportunities for moving consumer law in a different direction, and discusses potential threats to consumer welfare, especially in connection with the changing political landscape in many parts of the world. Several chapters examine consumer law in individual countries, while others have an international focus.

Smart Contracts Marcelo Corrales Compagnucci 2021-05-06 This book brings together a series of contributions by leading scholars and practitioners to examine the main features of smart contracts, as well as the response of key stakeholders in technology, business, government and the law. It explores how this new technology interfaces with the goals and content of contract law, introducing and evaluating several mechanisms to improve the 'observability' and reduce the costs of verifying contractual obligations and performance. It also outlines various 'design patterns' that ensure that end users are protected from themselves, prevent cognitive accidents, and translate expectations and values into more user-oriented agreements. Furthermore, the chapters map the new risks associated with smart contracts, particularly for consumers, and consider how they might be alleviated. The book also discusses the challenge of integrating data protection and privacy concerns into the design of these agreements and the broad range of legal knowledge and skills required. The case for using smart contracts goes beyond 'contracts' narrowly defined, and they are increasingly used to disrupt traditional models of business organisation. The book discusses so-called decentralised autonomous organisations and decentralised finance as illustrations of this

trend. This book is designed for those interested in looking to deepen their understanding of this game-changing new legal technology.

The Cambridge Handbook of Smart Contracts, Blockchain Technology and Digital Platforms Larry A. DiMatteo

2019-10-31 The product of a unique collaboration between academic scholars, legal practitioners, and technology experts, this Handbook is the first of its kind to analyze the ongoing evolution of smart contracts, based upon blockchain technology, from the perspective of existing legal frameworks - namely, contract law. The book's coverage ranges across many areas of smart contracts and electronic or digital platforms to illuminate the impact of new, and often disruptive, technologies on the law. With a mix of scholarly commentary and practical application, chapter authors provide expert insights on the core issues involving the use of smart contracts, concluding that smart contracts cannot supplant contract law and the courts, but leaving open the question of whether there is a need for specialized regulations to prevent abuse. This book should be read by anyone interested in the disruptive effect of new technologies on the law generally, and contract law in particular.

Smart Legal Contracts Jason Allen 2022-04-04 Smart Legal Contracts: Computable Law in Theory and Practice is a landmark investigation into one of the most important trends at the interface of law and technology: the effort to harness emerging digital technologies to change the way that parties form and perform contracts. While developments in distributed ledger technology have brought the topic of 'smart contracts' into the mainstream of legal attention, this volume takes a broader approach to ask how computers can be used in the contracting process. This book assesses how contractual promises are expressed in software and how code-based artefacts can be incorporated within more conventional legal structures. With incisive contributions from members of the judiciary, legal scholars, practitioners, and computer scientists, this book sets out to frame the borders of an emerging area of law and start a more productive dialogue between the various disciplines involved in the evolution of contracts as software. It provides the first step towards a

more disciplined approach to computational contracts that avoids the techno-legal ambiguities of 'smart contracts' and reveals an emerging taxonomy of approaches to encoding contracts in whole or in part. Conceived and written during a time when major legal systems began to engage with the advent of contracts in computable form, and aimed at a fundamental level of enquiry, this collection will provide essential insight into future trends and will provide a point of orientation for future scholarship and innovation.

Usefulness and Dangers of Smart Contracts in Consumer and Commercial Transactions Oscar Borgogno 2019

The public debate about smart contracts, meant as self-help remedies grounded on distributed ledger technology, is filled with alarms and high expectations. They have been praised by the tech community as infallible software able to carry out the whole contractual cycle, from formation to enforcement.

Conversely, several legal scholars have raised concerns regarding both smart contracts inability to reflect relational aspects of contract governance and the augmented complexity generated by the translation of an agreement into computer code. By building on the extant literature and avoiding any premature enthusiasm, this article focuses the discussion on the potential areas which could effectively benefit from smart contracts implementation. Firstly, it argues that smart contracts might be a viable tool to tackle effectively consumers inertia in triggering and enforcing their kinds of rights which are standardized and easily verifiable. Secondly, smart contracts have the potential to foster commercial relationships by lowering down transaction costs arising from lack of trust between merchants. Thus, smart contracts are likely to provide better alternatives to traditional tools of business practice, such as letters of credit and escrow agreements. Lastly, the article points out that, while businesses already have commercial incentives to implement smart contracts on their own, when it comes to consumer protection, regulators shall take the lead by testing, through regulatory sand-boxes, smart contracts potential.
