It can serve as a core text, supplemented by readings in the original literature, as a reference guide for students and lecturers alike, or as an ideal revision guide prior to exams. Instant Notes in Physiological Psychology is primarily intended for students taking a first course in the subject, but can also be used as an introduction to the field for undergraduates and graduates from other subject areas.

Drugs and Human Behavior David M. Grilly 1998 This text introduces students to the field of psychopharmacology, with special emphasis on the relationships between drugs, their mechanisms of action in the nervous system, and human behavior. By examining human drug use from historical, societal, and biological perspectives, the author provides a foundation for understanding drugs affecting the brain and their usage. Pharmacotherapy for the major mental disorders is described from both biochemical and clinical efficacy perspectives. Information is organized from the general to the specific, beginning with a historical perspective and subsequently moving through coverage of basic pharmacological principles and processes, drug classifications, and approaches to drug tolerance, dependence and abuse. The Biological and Social Determinants of Child Development Susan H. Landry 2003 The *Biological and Social Determinants of Child Development* stimulates cross-disciplinary communication and research collaboration in the field of child development. While the papers in this issue seem diverse in terms of topic and discipline, there are a number of common themes: *critical period for brain development and the importance of specific environmental input during this period; *importance of early brain development and enriched environments is supported in articles describing findings from human studies; *potential for brain plasticity following specialized retraining is found in a compelling paper demonstrating different profiles of brain activation for normal readers vs. those who have dyslexia and younger children at high risk for development of reading disabilities;

and *critical period, brain plasticity, and parallel changes in developing behavior and brain structure and functioning. As a number of papers in this issue describe potential interventions, one is relevant because it describes the numerous factors that make results of such studies have the potential to generalize to larger populations. Putting the described papers in a broad perspective, the last article argues that we cannot understand the health status of a society without understanding the health-determining influences across the life course.
