Environmental Pollution and the Media Glenn D.
Hook 2017-04-07 This book offers a theoretically
informed empirical investigation of national
media reporting and political discourse on
environmental issues in Australia, China and
Japan. It illuminates the risks, harms and
responsibilities associated with climate change
through an analysis of pollution, adopting an
interdisciplinary approach drawing on both the

social sciences and humanities. A particular
strength of the work is the detailed analysis of
the data using a range of both quantitative and
qualitative techniques, enabling the authors to
reveal in rich and compelling detail the complex
relationship between risk and responsibility in
the climate change discourse. The case studies
of Australia, China and Japan are set in the
current literature as well as in the historical
context of climate change in these three
countries. The analysis of the media discourse
on the Great Barrier Reef in Australia
demonstrates how the mining of coal for
overseas markets has led to devastating harm to
the life of the reef. A critical discussion of the
Chinese documentary, *Under the Dome*, shows
how this medium has played a crucial role in
building awareness of the harm from

atmospheric pollution among the citizens, shaping attitudes and promoting action. The first case study of Japan elucidates how cross-border atmospheric pollution from China forges a chain of responsibility for responding to climate change, running from the state to society. The other case study of Japan demonstrates how 'smart cities' have emerged as a way to mitigate the risks and harms of climate change. The Conclusion draws together the similarities and differences in how climate change is addressed in the three countries. In all, *Environmental Pollution and the Media: Political Discourses of Risk and Responsibility in Australia, China and Japan* uncovers the dynamics of the triadic relationship among risk, harm and climate change in Australia, China and Japan. By so doing, the book makes an original and timely contribution to understanding comparative media, discourse and political debates on climate change.

Environmental Policy and Public Health William

N. Rom 2011-09-09 This textbook provides an overview of the major environmental policy issues, past and present, and explains the interplay among law, science, and advocacy as related to environmental policymaking in the United States and abroad. *Environmental Policy and Public Health* examines the main sources of pollution and threats to environmental integrity and explores the consequences of pollution on the environment and the population. Throughout the book, noted environmental policy expert William N. Rom explains the legal basis for environmental action, beginning with the Clean Air Act, the Wilderness Act, the National Environmental Policy Act, the Endangered Species Act, and international treaties. In addition to providing information about existing laws, the author presents potential policy alternatives that offer real-world solutions. Comprehensive in scope, the book incorporates developments in law, economics, global warming, and air pollution. *Environmental Policy*

and Public Health covers these topics and also puts an emphasis on wilderness protection. An important focus of the book is an assessment of the role of policy analysis in the formation and implementation of national and local environmental policy. Companion Web site: www.josseybass.com/go/rom

Air Pollution, Air Quality, and Climate Change Angelo Basile 2024-11-25 *Air Pollution, Air Quality, and Climate Change* offers a review of the latest advances and developments in the study of air pollution and air quality in the face of continuing climate change. The editors begin with a detailed review of air pollution and its sources, effects, and impacts. In-depth chapters follow on atmospheric chemistry, air pollution meteorology, and take a look at indoor and urban air quality. The editors then explore the connection between air quality and climate change, the effects of CO₂ on air quality, and use of carbon capture and storage. Finally, the book closes with a discussion of environmental

policy making as well as future considerations for air pollution, air quality, and climate change. This text is a timely and valuable reference for anyone working towards solutions to reduce air pollution, improve air quality, and lessen the effects of climate change. - Helps readers understand atmospheric pollutants, exposure assessment, and material damage - Explores the role of carbon dioxide in air pollution and its effect on air quality - Provides innovative approaches, new technologies, and strategies to reduce air pollution and improve air quality
Climate Change and Air Pollution Rais Akhtar 2017-10-05 This book discusses regional and international climate-change, air-pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air

pollution and health. As stressed by the IPCC, “pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks,” according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world’s greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA, suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about six out of 10

of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K.), Southern Europe (Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

Environmental Pollution and Natural Resource Management Kanchan Deoli

Bahukhandi 2022-07-21 This book presents conference articles related to environmental pollution and natural resource management, and environmentally friendly technologies that lead to sustainable development presented in the Conference "Sustainable Management of Environment & Natural Resource Through Innovation in Science and Technology". The book highlights the latest development and innovation in environmental science, technology, and interdisciplinary research to improve the environment and health safety. It includes innovations and improvisations in the broad area of science and technology, natural resource, and environment management. It deliberates on the current burning issues of environment protection management and sustainable development, environmental pollution, global warming, and climate change. The development strategies must therefore be shaped by the

following components: The satisfaction of basic human requirements The eradication of poverty Self-reliant and participatory development Environmental consciousness Technology has to play a critical role in the process of changing industrial society. But innovation has to be embedded in social and organizational innovation. This book provides a wide range of research articles in the area of science and technology, sustainability, natural resource management, ecology and its environmental fields, geosciences and geology, atmospheric sciences, sustainability, climate change, and extreme weather, global warming, and environmental change, the effect of climate change on the ecosystem, environment, and pollution.

Environmental Policies for Air Pollution and Climate Change in the New Europe Caterina De Lucia 2010-09-13 This book presents an integrated approach to recent regulations on air pollution with particular emphasis on

transborder air pollution, climate change and energy policies in the new Europe.

Health of People, Health of Planet and Our Responsibility Wael Al-Delaimy 2020-05-13

This open access book not only describes the challenges of climate disruption, but also presents solutions. The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on climate change has been established through extensive published evidence and reports. However, the connections between climate change, the health of the planet and the impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led

to new weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem. The solutions and actions we explore in this book engage diverse sectors of civil society, faith leadership, and political leadership, all oriented by ethics, advocacy, and policy with a special focus on poor and vulnerable populations. The book highlights areas we think will resonate broadly with the public, faith leaders, researchers and students across disciplines including the humanities, and policy makers. *Ozone Depletion, the Greenhouse Effect, and*

Climate Change United States. Congress. Senate. Committee on Environment and Public Works. Subcommittee on Environmental Pollution 1986

Air Pollution in the 21st Century T. Schneider 1999-03-12 This symposium was jointly organized by the United States Environmental Protection Agency and The Netherlands Ministry of Housing, Spatial Planning and the Environment. These proceedings will provide a stimulus for taking up the challenges of environmental policy development in the 21st century, and will contribute to continuing co-operation. Clean air is a basic condition for health. Air pollution aggravates respiratory problems, leading to increased sickness absenteeism, increased use of health care services and even premature mortality. Air pollution is under intensive discussion in the United States and Europe. In The Netherlands, a wide range of policy instruments have been formulated which have reduced air pollution. For

example; since 1975, sulphur dioxide and lead emissions have been reduced. However, emission reduction figures for many other substances are more modest. Many air pollution problems persist because progress in countering these problems is nullified by growth in the economy and traffic. Another important target is the prevention of climate change. The international community is agreed that the increasing concentration of greenhouse gases in the atmosphere has led to a gradual increase in the earth's temperature. In terms of the environmental consequences and social implications, the greenhouse problem surpasses all other air quality problems. Across Europe, strategies are being developed to reduce acidification and photochemical air pollution. An air emission ceiling for each country in the European Union is being agreed. In the area of climate change, there is good co-operation between the United States, The Netherlands and other EU Members States in the ongoing global

negotiations. This is the start of a new movement. In the last century economies and societies developed through increasing human productivity. In the next century they must develop through increasing the productivity of fuel and natural resources.

Proceedings of the International Symposium on Air Pollution and Climate Change Effects on Forest Ecosystems, February 5-9, 1996, Riverside, California 1998

Climate Change, Air Pollution and Global Challenges 2013-11-19 There are significant pressures from climate change and air pollution that forests currently face. This book aims to increase understanding of the state and potential of forest ecosystems to mitigate and adapt to climate change in a polluted environment. It reconciles process-oriented research, long-term monitoring and applied modeling through comprehensive forest ecosystem research. Furthermore, it introduces "forest super sites for research for integrating

soil, plant and atmospheric sciences and monitoring. It also provides mechanistic and policy-oriented modeling with scientifically sound risk indications regarding atmospheric changes and ecosystem services. - Identifies current knowledge gaps and emerging research needs - Highlights novel methodologies and integrated research concepts - Assesses ecological meaning of investigations and prioritizing research need

Climate Justice through the Polluter-Pays Principle Patrick Kimuyu 2018-02-28 Polemic Paper from the year 2018 in the subject Politics - Environmental Policy, grade: 1.3, Egerton University, language: English, abstract: It is evident that the environment is experiencing immense consequences from the impact of pollution. One of the most challenging issues related to the degradation of the environment owing to pollution is the phenomenon of climate change. Climate change explains the adverse effects of environmental degradation and pollution is the principal cause of this life-threatening phenomenon. Despite the remarkable progress achieved in combating environmental pollution through environmental policy approaches, there is a need for climate justice in which the polluter will be held responsible for the damage caused to the

environment. In theory, this is the approach of the so-called Polluter Pays Principle. This approach appears relevant in addressing issues related to environmentally-mediated to humans. Despite the endless debate on issues of morality and justice, especially in America, the tenets of climate justice should be upheld by enforcing environmental policies that require the polluter to pay. Therefore, this argumentative essay will present an array of aspects that explain why the polluter should pay. It will discuss property rights, economic efficiency, tradable permits, and provide the means on how polluters can pay. *Climate Change and Environmental Degradation in the MENA Region* Ayad Al-Quraishi 2024-12-23 This book reviews the factors contributing to the degradation of natural resources in the MENA region caused by climate change and contamination. It examines how these issues affect humans, their health, resources, and the planet's future. The impact of climate change is evident in the diminishing

quality of land, water, and air, which leads to several environmental problems such as drought, land degradation, vegetation decline, reduced water bodies, soil damage, and other ecological concerns. Divided into 21 chapters, the book comprehensively analyses the risks brought about by climate change and environmental pollution. The chapters are contributed by a diverse team of authors from various countries in the MENA region, who offer a comprehensive overview of recent technologies, future developments, and several case studies analyses. In this book, readers will find topics such as: Impact of climate change, saline irrigation water, and other factors on soil degradation and carbon and nitrogen cycling in the MENA region Desertification, flood-storms, contamination, and their effects on natural resources and sustainability in the region Impact of recycled scrap steel on soil contamination, agriculture wastewater on lakes degradation and water pollution, and the effects of wastewater on

agriculture Consequences of mismanaging natural resources and their influence on the environment interrelation between Greenhouse Gas Emissions, Climate Change, and the deterioration of natural resources Application of non-conventional methods to address natural resource issues. This book calls for action to protect natural resources and the environment. These measures may include enacting legislation and regulations to restrict human activities, developing public understanding of the necessity of environmental protection against climate change and environmental contamination, and supporting sustainable behaviours to preserve natural resources. Given its breadth, the book appeals to scholars, researchers, and policymakers alike.

ENVIRONMENTAL POLLUTION AND CLIMATE CHANGE M. M. Abid Ali Khan 2020-04 Erupting volcanoes, earthquakes, dust storms and meteorites smashing into the Earth's crust are natural phenomena that can cause climate

change and air pollution: dinosaurs may have met their end after a giant meteorite kicked up so much dust that it blocked out the sun for decades, reducing photosynthesis and preventing the growth of plants.

Climate Change, Air Pollution and Global

Challenges Andrzej Bytnerowicz 2013-11-19 A review of the current status of air pollution and climate change (CC) in the United States from a perspective of their impacts on forest ecosystems is provided. Ambient ozone (O₃) and nitrogen (N) deposition have important and widespread ecological impacts in U.S. forests. Effects of sulphurous (S) air pollutants and other trace pollutants have significant ecological importance only at much smaller geographic scales. Complex interactive effects of air pollution and CC for selected future CC scenarios are reviewed. In addition, simulations of past, present, and future hydrologic, nutrient, and growth changes caused by interactive effects of air pollution and CC are described for

two U.S. forest ecosystems. Impacts of O₃, N deposition, and CC on growth and hydrology of mixed conifer forests in the San Bernardino Mountains in southern California were projected with the DayCent model. Effects of N deposition, CO₂ fertilization, N deposition, and CC on northern hardwood forests at the Hubbard Brook Experimental Forest in New Hampshire were simulated with the PnET-BGC model. Projected changes in these forests can influence the provision of ecosystem services such as C sequestration and water supply. The extent of these effects will vary depending on the future intensity and extent of CC, air pollutant emission levels, the distribution of air pollution, and other factors such as drought, pest outbreaks, fire, etc. Our chapter ends with research and management recommendations intended to increase our ability to cope with uncertainties related to the future interactive effects of multiple air pollutants, atmospheric deposition, CC, and other biotic and abiotic stressors.
