The Cell Geoffrey M. Cooper 2013 Designed for use in shorter introductory cellular biology courses, The Cell presents current comprehensive science in a readable and cohesive text. The sixth edition retains the overall organization, themes, and special features that made the previous edition so popular, but has been updated throughout to reflect major advances in the field. The book will be supported by a companion website, which offers a wealth of study and review material as well as rich multimedia resources including: quizzes, animations of key concepts and processes, chapter summaries, interactive micrographs and a collection of video microscopy showing biological processes in action.

Molecular Cell Biology & Launchpad for Molecular Cell Biology (6 Month Online) Harvey Lodish 2016-06-30*Cell and Molecular Biology* Gerald Karp 2010-07

Cell and Molecular Biology Gerald Karp 2009-10-19 Karp continues to help biologists make important connections between key concepts and experimentation. The sixth edition explores core concepts in considerable depth and presents experimental detail when it helps to explain and reinforce the concepts. The majority of discussions have been modified to reflect the latest changes in the field. The book also builds on its strong illustration program by opening each chapter with "VIP" art that serves as a visual summary for the chapter. Over 60 new micrographs and computer-derived images have been added to enhance the material. Biologists benefit from these changes as they build their skills in making the connection.

Molecular Cell Biology and LaunchPad for Molecular Cell Biology (1-Term Access) Harvey Lodish 2016-04

How We Live and Why We Die: The Secret Lives of Cells Lewis Wolpert 2011-01-24 Acclaimed biologist Lewis Wolpert eloquently narrates the basics of human life through the lens of its smallest component: the cell. Everything about our existence—imagination and reproduction, birth

and death—is governed by our cells. They are the basis of all life in the universe, from the tiniest of bacteria to the most complex of animals. Genes in developing embryos determine the makeup of individuals, and the rapid firing between nerve cells creates the spirit of who we are. When we age, our cells cannot repair the damage they have undergone; when we get ill, it is because cells are so damaged they stop working and die. In the tradition of Lewis Thomas's science classic *The Lives of a Cell*, Wolpert, an internationally acclaimed embryologist, draws on the recent discoveries of genetics to demonstrate how human life derives from a single cell and then grows into a body: an incredibly complex society made up of billions of cells. Wolpert sensitively examines the science behind often controversial research topics that are much discussed but rarely understood—stem cell research, cloning, DNA, and mutating cancer cells—all the while illuminating how the intricacies of cellular behavior bear directly on human behavior. Wolpert isn't afraid to tackle the tough questions, including how and why single cells evolved into complex organisms and, first and foremost, what gave rise to the original cell, the origin of all life. Lively and passionate, *How We Live and Why We Die* is both an accessible guide to understanding the human body and a deeply reverent meditation on life itself.
