Digest of United Kingdom Energy Statistics 2011 Great Britain: Department of Energy and Climate Change 2011-07-28 This issue of the Digest of United Kingdom Energy Statistics (DUKES) is part of a series and updates the figures given in the DUKES 2010. The publication consists of seven chapters; the first chapter deals with overall energy, with the other chapters covering specific fuels, combined heat and power and renewable sources of energy. The statistics presented in this digest will generate widespread interest from anyone working within or with an interest in energy sources, consumption and climate change. Chapters covering specific fuels and renewable sources of energy contain details on the production and consumption of individual fuels, presented using commodity balances. A commodity balance illustrates the flow of a fuel through from production to final consumption. These individual commodity balances are also combined in an energy balance, showing the interaction between different fuels. General energy statistics are presented

in a table, revealing energy consumption by final users and an analysis of energy consumption by main industrial groups. Surveys conducted by AEA Energy & Environment on behalf of DECC estimate the contribution made by combined heat and power and renewable energy to energy production and consumption in the UK.

Production Availability and Reliability Alain Leroy 2018-04-16 The objective of the book is to provide all the elements to evaluate the performance of production availability and reliability of a system, to integrate them and to manage them in its life cycle. By the examples provided (case studies) the main target audience is that of the petroleum industries (where I spent most of my professional years). Although the greatest rigor is applied in the presentation, and justification, concepts, methods and data this book is geared towards the user.
