Creating Capacity and Capability: Embracing Advanced Technologies and Innovations for Sustainable Future in Building Education and Practice Monty Sutrisna 2025-05-15 This three-volume book is the proceeding of the 46th Australasian Universities Building Education Association (AUBEA) 2023 Conference which brings together papers on construction and built environment education and practice. This particular conference theme, "Creating Capacity and Capability: Embracing Technologies and Innovations for Sustainable Future in Building Education and Practice" is closely related to a flagship national research programme funded by the Government of New Zealand, known as the CanConstructNZ research programme, aiming to balance the capacity and capability in the construction industry and the national pipeline of construction projects. The capacity and capability of our construction industry in fulfilling the construction needs of the whole nation are reflected in the national pipeline of construction projects and have long been recognised as one of the main challenges facing the construction sector. The practices and education of building and construction play an important role in determining the capacity and capability of the construction industry. Within the context of achieving sustainable future and embracing advanced technologies to create capacity and capability in the construction sector, various concepts, research, and innovative development have emerged and taken place. This particular conference theme has facilitated more in-depth discourses and discussions on the latest ideas and innovation within the building and construction education and practice, not only from the Australasian region but also from the wider international community, including the USA, the UK, Brazil, South Africa, Nigeria, China, and Sri Lanka. The

contents of this book will be of interest to academic researchers, industry professionals and policy makers alike.

Renaissance And Renascences In Western Art Erwin Panofsky 2018-05-04 Renaissance and Renascences in Western Art spans the period from the 10th to the 15th century, including discussion of the Carolingian renaissance and the 12th century proto-renaissance. Erwin Panofsky posits that there were "reanscences" prior to the widely known Renaissance that began in Italy in the 14th century. Whereas earlier renaissances can be classified as revivals, the Renaissance was a unique instance that led to a wider cultural transformation.

Perspectives On Western Art Linnea Wren

2018-02-22 This anthology of readings related to Western art history explains specific works of art

illustrated in Janson's History of Art and De la Croix and Tansey's Gardner's Art Through the Ages in terms of the ideas, beliefs, and concerns of the people and cultures who created the art. It brings a new understanding of art because it shows the social and cultural basis of major works of art through history. The ten sections are Ancient Near East; Egyptian; Aegean; Greek; Etruscan; Roman; early Christian, Byzantine, and Islamic; early Medieval; Romanesque; and Gothic. The readings have been drawn from many areas of intellectual and social history, including religion, philosophy, literature, science, economics, and law. Each selection is preceded by an introductory note, which discusses the readings in terms of its subject and theme, its source and usage, and its relevance to the study of the work of art.

Styles And Types Of American Architecture Alan Gowans 1993-04-06 Discussing North American buildings, this book relates them to time and place, defining and identifying central characteristics, explaining social function and cultural expression. It integrates interior design and social and cultural history from the 17th century to the present.

Rethinking Design and Interiors Shashi Caan 2011-08-22 The world and the people living in it are increasingly and rapidly being affected by environmental and technological changes. It is imperative that the design profession addresses these developments with a new way of thinking. This book points the way for the design of interiors in this newly complex world and will be indispensable for students, practitioners and theoreticians. The book is divided into four chapters that explore aspects of the human experience of the interior, from man's earliest search for shelter to an outline of past and current thinking on design, psychology and well-being. An epilogue looks at such future concerns as population growth and sustainability and suggests how the design profession can confront these challenges. *Rethinking Design and Interiors* is a fascinating exploration of how art and science can come together for the benefit of those who inhabit the built environment.
