### **The Online Tutor's Toolkit**

Molly Bolding 2022-10-12 This book contains everything you need to know to get started as an online tutor. It covers the essentials of tutoring, choosing your tech and software, managing homework, and getting set up alongside detailed guidance focusing on each level of tuition. With techniques developed through research and first-hand experience, the author explains exactly how to turn existing subject knowledge into effective tutoring for students of all ages in a variety of subjects. Divided into two parts, the first answers the logistical questions facing every new tutor such as: what equipment do I need? Where can I apply? How much should I charge? The second half focuses on how to tutor different age groups effectively

and subject-specific areas including English, Maths, and Science, as well as the author's tried-and-tested '5 step' process for choosing a subject, assessing a student, and planning their first lessons. There is also information on how to support students writing personal statements and applying to university, as well as teaching English as a Second Language. Alongside tailored, up-to-date information on available software, hardware, exam specifications, and the online tutoring marketplace, the book contains a 10-week timetable of adaptable lesson plans so new tutors can get started immediately. Finally, there are two additional downloadable chapters which expand on less common subjects and another which includes a digital download of every resource from the book. With suggestions for resources, homework, and timings to

support you at every stage, this is an essential read for anyone wanting to succeed as an online tutor.

### **Principles of Environmental**

**Geochemistry** G. Nelson Eby 2016-04-20 Many geochemists focus on natural systems with less emphasis on the human impact on those systems. Environmental chemists frequently approach their subject with less consideration of the historical record than geoscientists. The field of

environmental geochemistry combines these approaches to address questions about the natural environment and anthropogenic effects on it. Eby provides students with a solid foundation in basic aqueous geochemistry before discussing the important role carbon compounds, isotopes, and minerals play in environmental issues. He then guides students through how these concepts apply to problems facing our atmosphere, continental lands, and oceans. Rather than broadly discussing a variety of environmental problems, the author focuses on principles throughout the text, leading students to understand processes and how knowledge of those processes can be applied to environmental problem solving. A wide variety of case studies and quantitative problems accompany each chapter, giving each instructor the flexibility to tailor the material to his/her course. Many problems have no single correct answer, illustrating the analytical nature of solving

real-world environmental problems.

### **A Level Business Studies**

David Floyd 1997 This text on business studies is one of a series of study guides for A-Levels and Scottish Higher Grade which are designed for use throughout the course as a supplement to studies at school or college, and as revision guides for the final approach to the exams. The focus is on the knowledge and techniques needed to pass with the best possible grades, and there is practical guidance on studying, revising, course-work and exam preparation. Exam questions are included for each topic, and a test run section incorporates a progress test and a mock exam with answers.

**A-level Economics** Ray Powell 1996 This revised Economics A Level study guide is intended to give students the best possible chance of success. It is designed for use both throughout the course as a supplement to studies and as a

revision guide for the final approach to examinations. The focus of the book is on the techniques needed to pass with the best possible grades.
