*Critical Path Methods in Construction Practice*

James M. Antill 1991-01-08 An updated and revised edition of the standard work on the use of critical path methods (CPM) in the construction industry. Describes the mechanics and procedures of CPM in construction planning and works control and demonstrates its application to large and small projects alike. Emphasis is not on the mathematics--the stress here is on the solution of problems commonly encountered in construction practice.

Multiple-Choice Problems Six-Minute Solutions

for Civil PE Exam Construction Depth Problems

contains over 100 multiple-choice problems that

are grouped into seven chapters that correspond

to a topic on the PE Civil exam construction

depth section. Problems are representative of

the exam's format, scope of topics, and level of

difficulty. Like the PE exam, an average of six

minutes is required to solve each problem in this

book. Each problem also includes a hint for

optional problem-solving guidance.

Comprehensive step-by-step solutions for all

problems demonstrate accurate and efficient

solving approaches. Get your Construction

**Industry 4.0 Solutions for Building Design  
and Construction** Farzad Pour Rahimian  
2021-12-20 This book provides in-depth results  
and case studies in innovation from actual work  
undertaken in collaboration with industry  
partners in Architecture, Engineering, and  
Construction (AEC). Scientific advances and  
innovative technologies in the sector are key to  
shaping the changes emerging as a result of

Industry 4.0. Mainstream Building Information  
Management (BIM) is seen as a vehicle for  
addressing issues such as industry  
fragmentation, value-driven solutions, decision-  
making, client engagement, and design/process  
flow; however, advanced simulation, computer  
vision, Internet of Things (IoT), blockchain,  
machine learning, deep learning, and linked data  
all provide immense opportunities for dealing  
with these challenges and can provide  
evidenced-based innovative solutions not seen  
before. These technologies are perceived as the  
“true” enablers of future practice, but only  
recently has the AEC sector recognised terms  
such as “golden key” and “golden thread” as  
part of BIM processes and workflows. This book  
builds on the success of a number of initiatives  
and projects by the authors, which include  
seminal findings from the literature, research  
and development, and practice-based solutions  
produced for industry. It presents these findings  
through real projects and case studies developed

by the authors and reports on how these technologies made a real-world impact. The chapters and cases in the book are developed around these overarching themes: • BIM and AEC Design and Optimisation: Application of Artificial Intelligence in Design • BIM and XR as Advanced Visualisation and Simulation Tools • Design Informatics and Advancements in BIM Authoring • Green Building Assessment: Emerging Design Support Tools • Computer Vision and Image Processing for Expediting Project Management and Operations • Blockchain, Big Data, and IoT for Facilitated Project Management • BIM Strategies and Leveraged Solutions This book is a timely and relevant synthesis of a number of cogent subjects underpinning the paradigm shift needed for the AEC industry and is essential reading for all involved in the sector. It is particularly suited for use in Masters-level programs in Architecture, Engineering, and Construction.
