Critical Thinking Tracy Bowell 2014-10-24 We are frequently confronted with arguments. Arguments are attempts to persuade us - to influence our beliefs and actions - by giving us reasons to believe this or that. *Critical Thinking: A Concise Guide* will equip students with the concepts and techniques used in the identification, analysis and assessment of arguments. Through precise and accessible discussion, this book provides the tools to become a successful critical thinker, one who can act and believe in accordance with good reasons, and who can articulate and make explicit those reasons. Key topics discussed include: core concepts in argumentation how language can serve to obscure or conceal the real content of arguments; how to distinguish argumentation from rhetoric how to avoid common confusions surrounding words such as 'truth', 'knowledge' and 'opinion' how to identify and evaluate the most common types of argument how to distinguish good reasoning from bad in terms of deductive validity and induction. This fourth edition has been revised and updated throughout, with a new introduction for each chapter and up-to-date topical examples. Particular revisions include: practical reasoning; understanding quantitative data, statistics, and the rhetoric used about them; scientific reasoning; the connection to formal logic and the logic of probability; conditionals; ambiguity; vagueness; slippery slope arguments; and arguments by analogy. The dynamic Routledge Critical Thinking companion website provides thoroughly updated resources for both instructors and students including new examples and case studies, flashcards, sample questions, practice questions and answers, student activities and a testbank of questions for use in the classroom.

What is the Argument? Steven Lee 2002 "What Is the Argument? *Critical Thinking in the Real World* is a clear, thoughtful text that solves a wide array of teaching problems unique to the critical thinking course. As the subtitle states, Lee introduces students to the kind of arguments they encounter outside the classroom, and develops a distinctive and effective set of methods by which they can identify and evaluate arguments. More than most texts, *What Is the Argument* presents an

interesting, integrated, skill-building approach that satisfies students and teachers alike.

Reasoning and Public Health: New Ways of Coping with Uncertainty Louise Cummings 2015-03-27 This book argues that in order to be truly effective, public health must embrace a group of reasoning strategies that have traditionally been characterized as informal fallacies. It will be demonstrated that these strategies can facilitate judgements about complex public health issues in contexts of uncertainty. The book explains how scientists and lay people routinely resort to the use of these strategies during consideration of public health problems. Although these strategies are not deductively valid, they are nevertheless rationally warranted procedures. Public health professionals must have a sound understanding of these cognitive strategies in order to engage the public and achieve their public health goals. The book draws upon public health issues as wide ranging as infectious diseases, food safety and the potential impact on human health of new technologies. It examines reasoning in the context of these issues within a large-scale, questionnaire-based survey of nearly 900 members of the public in the UK. In addition, several philosophical themes run throughout the book, including the nature of uncertainty, scientific knowledge and inquiry. The complexity of many public health problems demands an approach to reasoning that cannot be accommodated satisfactorily within a general thinking skills framework. This book shows that by developing an awareness of these reasoning strategies, scientists and members of the public can have a more productive engagement with public health problems.

Critical Thinking and Language Tim John Moore 2011-10-13 This book clarifies the idea of critical thinking by investigating the 'critical' practices of academics across a range of disciplines. Drawing on key theorists - Wittgenstein, Geertz, Williams, Halliday - and using a 'textographic' approach, the book explores how the concept of critical thinking is understood by academics and also how it is constructed discursively in the texts and practices they employ in their teaching. Critical thinking is one of the most widely discussed concepts in debates on university learning. For many, the idea of teaching students to be critical thinkers characterizes more than anything else the overriding purpose of 'higher education'. But whilst there is general agreement about its importance as an educational ideal, there is surprisingly little agreement about what the concept means exactly. Also at issue is how and what students need to be taught in order to be properly critical in their field. This searching monograph seeks answers to these important questions.
