Communicate Janice A. Smith 2007-07-13 Written for all types of ITA programs an independent study course, a brief workshop, or extensive training this versatile text provides essential information for ITAs to develop strong teaching skills that ensure effective communication in the undergraduate classroom. The authors take the perspective that incoming ITAs are responsible for their own learning and teaching style. Each of the texts ten units includes work on English proficiency, teaching skills, and cultural awareness. Each unit centers around a common rhetorical teaching task in U.S. university classrooms: introducing oneself, introducing a syllabus, explaining a visual, defining a term, teaching a process, fielding questions, explaining complex topics at a basic level, presenting information over several class periods, and leading a discussion. Undergraduate textbook materials for fifteen academic fields are included in the appendix to provide ITAs with content relevant for practicing teaching and language skills. Because ITA programs vary in structure and number of training hours, the authors include a To the Instructor section, which is full of recommendations for the many ways the text can be used.

DESIGN & DEVELOPMENT OF ROBOTIC ARM REMOTE

CONTROLLED THROUGH A TCP/IP NETWORK Devashi Tandon

2018-03-26 Robotic Engineering has evolved significantly over the past fifteen years. With the help of AI, robots can perform many complicated tasks which were left best to humans earlier. This book does not deal with advanced robotics. However, it is a very good starting guide for learning the engineering behind building a robotic arm from scratch. It begins by illustrating the basic theories behind a (traditional) robotic arm and gives a systematic process of building a robotic arm, broken down into different phases of the project. It is also a good guide on how to build a professional software for managing the arm, and how to remotely control it through a computer which is geographically placed at another location than the arm itself. Since the book was developed from an actual project at IIT, Roorkee (which won the Institute Medal in 2003)
