National Science Board (U.S.). Commission on Precollege Education in Mathematics, Science, and Technology 1983 Leading experts in the fields of science, mathematics and education present a plan for improving mathematics, science and technology education for all American elementary and secondary students so that their achievement is the best in the world by 1995. The Commission believes that while individual American schools and students excel in science and mathematics, the average American student is said to need a much firmer grounding at the elementary and secondary school levels. It notes that the most serious problem is a severe shortage of qualified teachers. Makes a number of recommendations and calls for stronger leadership on this issue through such means as a National Education Council reporting to the President.
