Mathematics for Elementary School Teachers O'Daffer

2001-10

Enhancing Teaching and Learning Jean Donham 2008

You can take a proactive role in shaping instruction and respond to your users' needs and requests with this thoroughly revised and expanded guide. You'll learn how to develop and implement an effective library media program by integrating it into the total education environment. Part One covers all aspects of the school environment: students, curriculum and instruction, principals, school district administration, and the community. Part Two shows you how to integrate the school library media program throughout these environments using interaction and collaboration. New in this edition are discussions of

special education, post-high school transitions, shared school/public libraries, and more, along with a discussion of recent developments in elementary education, including standards, assessments, and the No Child Left Behind Act.

The Technology Connection

Kathleen Schrock 2000

Featuring recent articles from Library Talk, The Book Report, and Technology Connection, this book offers advice for school library media specialists in areas such as: collaborating with teachers, professional development, integrating technology with the curriculum, making the Internet accessible, funding, and public relations. Contributors include library professionals, scholars in library science, and experts on education and technology. No index. No bibliography. Annotation copyrighted by

Elementary Teachers' Opportunities for Learning
Katherine A. Morris 2003
How to Create and Use Rubrics for Formative Assessment and Grading
Susan M. Brookhart
2013-01-11 What is a rubric? A rubric is a coherent set of criteria for student work that describes levels of performance quality. Sounds simple enough, right? Unfortunately, rubrics are commonly misunderstood and misused. The good news is that when rubrics are created and used correctly, they are strong tools that support and enhance classroom instruction and student learning. In this

comprehensive guide, author Susan M. Brookhart identifies two essential components of effective rubrics: (1) criteria that relate to the learning (not the "tasks") that students are being asked to demonstrate and (2) clear descriptions of performance across a continuum of quality. She outlines the difference between various kinds of rubrics (for example, general versus task-specific, and analytic versus holistic), explains when using each type of rubric is appropriate, and highlights examples from all grade levels and assorted content areas. In addition, Brookhart addresses * Common misconceptions about rubrics; * Important differences between rubrics and other assessment tools such as checklists and rating scales, and when such alternatives can be useful; and * How to use rubrics for formative assessment and grading, including standards-based grading and report card grades. Intended for educators who are already familiar with rubrics as well as those who

are not, this book is a complete resource for writing effective rubrics and for choosing wisely from among the many rubrics that are available on the Internet and from other sources. And it makes the case that rubrics, when used appropriately, can improve outcomes by helping teachers teach and helping students learn.

Current Index to Journals in Education 2001

Teaching in Elementary and Secondary Classrooms Johanna Kasin Lemlech 2004 Building a community in the classroom is a way for teachers and students to be freer to learn and to explore ideas. This book is written for novice teachers, be they student teachers, beginning teachers, or interns. I have learned that when students (of all ages) work together in democratic classroom communities and are supported by teacher and administrative efforts, the classrooms become exciting environments, with students and teachers more engaged in meaningful activities.

Classroom Assessment in Mathematics George W. Bright 1998 This book includes a summary of the recommendations of a working conference on classroom assessment in mathematics held in May 1997. The book also includes all of the working papers prepared for that conference. The recommendations are directed to the research community, directors of teacher enhancement projects, state education agencies, regional and local staff development projects, and institutions of higher education. This conference brought together researchers, acknowledged experts in the field of assessment, and practitioners to focus on an important component of the educational process, namely quality classroom assessment.

Diversity With Quantitative, Qualitative, and Mixed Methods by renowned scholar Donna M. Mertens. This introductory research methods text incorporates the viewpoints of various research paradigms into its descriptions of qualitative, quantitative, and mixed methods as well as program evaluation. The work covers five major paradigms: post-positivist, constructivist, transformative, pragmatic, and Indigenous. Special emphasis on conducting research with culturally complex communities, based on the perspectives of feminists, ethnic/racial minorities, and people with disabilities is a hallmark of this text. In each chapter, the author carefully explains each step of the research process, from the literature review to analysis and reporting. Additionally, each chapter includes a published sample study and abstract to illustrate the concepts discussed in that chapter. The Sixth Edition includes more on community engagement, recent advances

in mixed methods, new applications of theoretical frameworks, and the latest research examples. Citations and references have all been updated to reflect the seventh edition of the Publication Manual of the American Psychological Association. Included with this title: LMS Cartridge: Import this title's instructor resources into your school's learning management system (LMS) and save time. Don't use an LMS? You can still access all of the same online resources for this title via the password-protected Instructor Resource Site.
