Improving an Engineering Change Request Management System to Improve Quality and Efficiency [electronic Resource] Jason J.

Forehand 2011 This study reviewed the engineering change process using quality improvement tools such as process mapping and value stream mapping to increase efficiency and improve quality for the internal customers at Company XYZ. The literature review focused on important aspects of an engineering change system, how to properly create a process map, and successful ways to create and implement value stream mapping activities. The methodology of this project included the review

of the existing engineering change process through data analysis and discovered areas of improvement from applying quality improvement tools such as value stream mapping. The results from the data analysis and quality improvement methods proved to be significant for increasing efficiency and communication of the engineering change process. The conclusion of this study reported on areas of discovery and recommendations for future study.

A Model-based Approach to Support the Management of Engineering Change Timothy Ashley William Jarratt 2004

Engineering Change Management Bahram

Hamraz 2014-01 Engineering changes are unavoidable and occur throughout the lifecycle of products. Due to the high interconnectivity of engineering products, a single change to one component usually has knock-on effects on other components causing further changes. This change propagation significantly affects the success of a product in the market by increasing development cost and time-to-market. As such engineering change management is essential to companies, but it is a complex task for managers and researchers alike. To address this challenge, the book at hand investigates the state-of-the-art of research in engineering change management and develops a method to support engineering change propagation analysis, termed FBS Linkage. This method integrates functional reasoning with change prediction. A product is modelled as a network of its functional, behavioural, and structural attributes. Change propagation is then described as spread between the elements along the links of this network.

SAP ERP In Enabling Successful Change Management

Tegegne Tesfaye Haile 2013 The computing literature contains many proposals for new ways of designing and developing computer-based systems, however, surprisingly (and worryingly) little work has been done to find the evidence that validates ideas about appropriate technical products and methods and links the theory to practice (Briony J Oates, 2006). Resistance to change is shown to be the greatest obstacle to change. The issue of successfully overcoming resistance to change can be achieved only if the end-users believe that using the new technology would enhance their performance. This research conducted empirical assessment and evaluation of SAP ERP software to find out its contribution to change management practice in Airline Company. The research investigates what parts of the system are missing or inadequately aligned in order to predict how capable the organizations can be in terms of organizational transformation. It is very

important to make sure that the new technology to be adopted will be able to support the change management practices afterwards. The new technology must promote the change management rather than opposing it.

Agile Change Olivier Kazandjian 2018-04-02

The speed of change is increasing daily in today's world. Companies are forced to launch new products faster and faster. The notion of project management is affected by this increased velocity. New product development methodologies, grouped under the name Agile, are starting to get recognized by companies as a mean to compete more effectively in this new environment. They started in the IT world and are now accepted in various industries. The role of the Change Manager was intrinsically linked to the Waterfall project management framework. Do we still need change management in an Agile Frameworks? What are his new responsibilities? Who are his or her new stakeholders? Those are some of the questions at the core of this book.

Olivier Kazandjian proposes some answers based on his own experience, and interviews with peers working both in the product development field and in change management area. Olivier Kazandjian spent the last 21 years working in IT project management, lean manufacturing, organizational changes and change management in various companies, and industries in the US, France, Denmark, Mexico. He is currently based in Mumbai where he oversees change management for 5 service centers across 3 countries in Asia. He holds an Engineering degree from the Ecole Centrale de Lyon in France and an MBA from the University of Michigan.
