Dissecting Death Frederick Zugibe, M.D. 2005-07-12 From TV's CSI to bestsellers by Patricia Cornwell and Kathy Reichs, interest in forensics is at an all-time high. Now one of our most respected forensic pathologists gives a behind-the-scenes look at eleven of his most notorious cases, cracked by scientific analysis and Sherlock Holmesian deduction. As chief medical examiner of Rockland County, New York, for almost thirty-five years, Dr. Frederick Zugibe literally wrote the book on the subject—his widely used textbook is considered the definitive text. Over the years he has pioneered countless innovations, including the invention of a formula to soften mummified fingers—enabling fingerprinting, and thus identification, of a long-deceased victim. He has appeared as an expert hundreds of times in the media and in the courtroom—and not once has a jury failed to accept his testimony over opposing expert witnesses. And now, in *Dissecting Death*, he has opened the door to the world of forensic pathology in all its gruesome and fascinating mystery. Dr. Zugibe takes us through the process all good pathologists follow, using eleven of his most challenging cases. With him, we visit the often grisly—though sometimes shockingly banal—crime scene. We inspect the body, palpate the wounds, search for clues in the hair and skin. We employ ultraviolet light, strange measuring devices, optical instruments. We see how a forensic pathologist determines the hour of death, the type of weapon used, the killer's escape route. And then we enter the lab, the world of high-tech criminal detection: DNA testing, fingerprinting, gunshot patterns, dental patterns, X-rays. But not every case ends in a conviction, and in a closing chapter Dr. Zugibe examines some recent high-profile cases in which blunders led to killers going free, either because the wrong party was brought to trial or because the evidence presented didn't do the trick—including Jon-Benet Ramsey's murder and, of course, the O.J. Simpson trial.

Dead Secret Beverly Connor 2005-12-06 "Call[ing] to mind the forensic mysteries of Aaron Elkins and Patricia Cornwell" (Chicago Sun-Times), Beverly Connor's spellbinding series proves that the dead do tell tales—and reveal secrets that can threaten the living in the most chilling of ways... In the depths of an unmapped cave, forensic anthropologist Diane Fallon makes an astonishing discovery: the decades-old skeleton of a caving victim. Soon, the remains of two more bodies are found—one in an old car submerged in the waters of an abandoned quarry, another buried in the Georgia woods. At first, with nothing to link the dissimilar victims except desiccated bones, Diane can't fathom the connection. But someone in her shadow does. It's the key to a mystery that reaches back seventy years in a heritage of love, greed, and murder—and an unearthed family secret that still holds the power to kill.

Teasing Secrets from the Dead Emily Craig, Ph.D. 2005-09-27 Teasing Secrets from the Dead is a front-lines story of crime scene investigation at some of the most infamous sites in recent history. In this absorbing, surprising, and undeniably compelling book, forensics expert Emily Craig tells her own story of a life spent teasing secrets from the dead. Emily Craig has been a witness to history, helping to seek justice for thousands of murder victims, both famous and unknown. It's a personal story that you won't soon forget. Emily first became intrigued by forensics work when, as a respected medical illustrator, she was called in by the local police to create a model of a murder victim's face. Her fascination with that case led to a dramatic midlife career change: She would go back to school to become a forensic anthropologist—and one of the most respected and best-known "bone hunters" in the nation. As a student working with the FBI in Waco, Emily helped uncover definitive proof that many of the Branch Davidians had been shot to death before the fire, including their leader, David Koresh, whose bullet-pierced skull she reconstructed with her own hands. Upon graduation, Emily landed a prestigious full-time job as forensic anthropologist for the Commonwealth of Kentucky, a state with an alarmingly high murder rate and thousands of square miles of rural backcountry, where bodies are dumped and discovered on a regular basis. But even with her work there, Emily has been regularly called to investigations across the country, including the site of the terrorist attack on the Murrah Building in Oklahoma City, where a mysterious body part—a dismembered leg—was found at the scene and did not match any of the known victims. Through careful scientific analysis, Emily was able to help identify the leg's owner, a pivotal piece of evidence that helped convict Timothy McVeigh. In September 2001, Emily received a phone call summoning her to New York City, where she directed the night-shift triage at the World Trade Center's body identification site, collaborating with forensics experts from all over the country to collect and identify the remains of September 11 victims. From the biggest news stories of our time to stranger-than-true local mysteries, these are unforgettable stories from the case files of Emily Craig's remarkable career.
