Living in the Environment G. Tyler Jr Miller 2004-09 Miller's LIVING IN THE ENVIRONMENT, 14th Edition is the most comprehensive and up-to-date environmental science text on the market. It has the most balanced approach to environmental science instruction, with bias-free comparative diagrams throughout and a focus on prevention of and solutions to environmental problems. Tyler Miller is the most successful author in academic writing on environmental science because of his attention to currency, trend setting presentation of content, ability to predict student and instructor needs for new and different supplements,

and his ability to retain the hallmarks on which instructors have come to depend. The content in the 14th edition of LIVING IN THE ENVIRONMENT is everything you have come to expect and more. In this edition, the author has added the "How Would You Vote?" feature, which is an application of environmental science-related topics in the news. Students apply their environmental science knowledge from the book to a Web activity, which helps them investigate environmental science issues in a structured manner. They then cast their votes on the Web. Results are then tallied. Also found at the Miller website is the much used "Updates on Line." Updated twice a year with articles from InfoTrac College Edition service, CNN. Today Video Clips, and Web links, instructors can seamlessly incorporate the most current news articles and research findings to support text presentations. This is a time saver for instructors and part-time teachers who can quickly determine what ancillary materials they want to utilize in just minutes. As with the last edition, this text is packaged with a free Student CD-ROM entitled "Interactive Concepts in Environmental Science." Organized by chapter, the CD gives students links to relevant resources, narrated animations, interactive figures, and prompts to review material and test themselves. *A New Science of Suffering, the Wisdom of the Soul, and the New Behavioral Economics of Happiness: Towards a General Theory of Well-being* Paul T. P Wong 2023-10-24 New developments in positive psychology have evolved into the 2nd and 3rd waves, going beyond the individual and positive focus towards complex systems, multi-cultures, and the existential positive psychology of transcending suffering. The present project aims at developing a general theory of well-being that integrates all the above changes as the new frontier of positive psychology. At a time when humanity is threatened by all kinds of existential crises, from climate change to nuclear war, from ideological polarization to a widening income gap, we need to develop a big-picture theoretical framework showing that happiness is not just for those living in peace and prosperity, but also for those struggling in dire poverty and war-ravaged countries like Ukraine, not just for the self, but also for others, not just for the present, but also for future generations. This broader approach towards wellbeing opens up new vistas for research and interventions.
