Diverse Issues in Higher Education 2006
The Effects of Government Stock on Investment Activity in BRICS Countries Maggie Kgomo 2019-12-15 Brazil, Russia, India, China and South Africa (BRICS) are distinguished as having the fast growing markets in the universe compared to other markets of emerging economies, according to their promising economic prospective and demographic power. This study investigated the effects of government stock on investment activity in BRICS countries. This study used panel autoregressive distributed lag model (PARDL), Engel-Granger causality test, impulse response functions (IRF) and variance decomposition tests. Such techniques were applied to the annual data for the periods 2001 to 2016 in order to determine the effects of

government stock on investment activity. The PARDL showed that in the long-run investment activity was positively influenced by government stock on mutual banks and government stock on liquid assets, and negatively related to government stock on bonds and government stock on corporations. The Engel-Granger causality test revealed existence of unidirectional movement between investment activity and government stock on corporations as well as from government stock on bonds to liquid assets. The impulse response functions showed the impulse percentage of fluctuation that the variables did contribute to each other, from various periods both in the short and long run. While the variance decomposition of investment indicated that investment was mainly shocked by its own innovations throughout all the periods. A critical evaluation is needed to

avoid investment shocks, instability of investment activity, instability of financial markets and the economy as a whole.

Macroeconomic Analysis in the Classical Tradition James

C W Ahiakpor 2021-03-23

Macroeconomic Analysis in the Classical Tradition explains how the influence of Keynes's macroeconomics, including his changed definitions of some key macroeconomic concepts, has impeded many analysts' ability to readily resolve disputes in modern macroeconomics. Expanding on his earlier work—*Macroeconomics without the Errors of Keynes* (2019)—the author delves into more aspects of macroeconomic theory and argues for a revision of Keynes's contribution to the field. Attention is given to theories and concepts such as Say's Law, the quantity theory of money, the liquidity trap, the permanent income hypothesis, 100% money, and the Phillips curve analysis. The chapters work to build a careful critique of Keynes's economics and make the case that the classical macroeconomics of

Smith, Say, Ricardo, Mill, and others could help resolve present-day policy disagreements and redefine macroeconomic priorities. This book provides essential reading for advanced students and scholars with an interest in the foundations of Keynes's theories and current debates within macroeconomic policy. *Complexity Economics for Environmental Governance* Jean-François Mercure 2022-11-17 In *Complexity Economics for Environmental Governance*, Jean-François Mercure reframes environmental policy and provides a rigorous methodology necessary to tackle the complexity of environmental policy and the transition to sustainability. The book offers a detailed account of the deficiencies of environmental economics and then develops a theory of innovation and macroeconomics based on complexity theory. It also develops a new foundation for evidence-based policy-making using a Risk-Opportunity

Analysis applied to the sustainability transition. This multidisciplinary work was developed in partnership with prominent natural scientists and economists as well as active policy-makers with the aim to revolutionize thinking in the face of the full complexity of the sustainability transition, and to show how it can best be governed to minimize its distributional impacts. The book should be read by academics and policy-makers seeking new ways to think about environmental policy-making.
