Modeling and Analysis of Dynamic Systems

Ramin S. Esfandiari 2014-04-24 Modeling and Analysis of Dynamic Systems, Second Edition introduces MATLAB®, Simulink®, and Simscape™ and then uses them throughout the

text to perform symbolic, graphical, numerical, and simulation tasks. Written for junior or senior level courses, the textbook meticulously covers techniques for modeling dynamic systems, methods of response analysis, and provides an introduction to vibration and control systems. These features combine to provide students with a thorough knowledge of the mathematical modeling and analysis of dynamic systems. See What's New in the Second Edition: Coverage of modeling and analysis of dynamic systems ranging from mechanical to thermal using Simscape Utilization of Simulink for linearization as well as simulation of nonlinear dynamic systems Integration of Simscape into Simulink for control system analysis and design Each topic covered includes at least one example, giving students better comprehension of the subject matter. More complex topics are accompanied by multiple, painstakingly worked-out examples. Each section of each chapter is followed by several exercises so that students

can immediately apply the ideas just learned. End-of-chapter review exercises help in learning how a combination of different ideas can be used to analyze a problem. This second edition of a bestselling textbook fully integrates the MATLAB Simscape Toolbox and covers the usage of Simulink for new purposes. It gives students better insight into the involvement of actual physical components rather than their mathematical representations.

Modeling and Analysis of Dynamic Systems - Solutions Manual Taylor & Francis Group
2010-03-02 The principal goal of this volume is to provide thorough knowledge of mathematical modeling and analysis of dynamic systems. The author introduces MATLAB® and Simulink® at the outset and uses them throughout to perform symbolic, graphical, numerical, and simulation tasks. The text is accompanied by a CD that contains user-defined functions (M files) that are executable in MATLAB as well as additional exercises on MATLAB and Simulink applications.

The author meticulously covers techniques for modeling dynamic systems, methods of response analysis, and the fundamentals of vibration and control systems. Each chapter features examples, exercises, and a summary.

Modeling and Analysis of Dynamic Systems

Charles M. Close 2001-08-20 The third edition of Modeling and Analysis of Dynamic Systems continues to present students with the methodology applicable to the modeling and analysis of a variety of dynamic systems, regardless of their physical origin. It includes detailed modeling of mechanical, electrical, electro-mechanical, thermal, and fluid systems. Models are developed in the form of state-variable equations, input-output differential equations, transfer functions, and block diagrams. The Laplace transform is used for analytical solutions. Computer solutions are based on MATLAB and Simulink. Examples include both linear and nonlinear systems. An introduction is given to the modeling and design

tools for feedback control systems. The text offers considerable flexibility in the selection of material for a specific course. Students majoring in many different engineering disciplines have used the text. Such courses are frequently followed by control-system design courses in the various disciplines.
