Introduction to Chemistry Richard C. Bauer 2024 "The sixth edition of Introduction to Chemistry continues to build on our belief that students learn best when the text and our classroom presentations focus on a conceptual approach to chemistry. Our class meetings are significantly different from traditional lecture presentations in many ways. Beginning with the first week of classes and continuing through the rest of the semester, we follow a sequence of topics that allows us to explain macroscopic phenomena from a molecular perspective. This approach places emphasis on conceptual understanding over algorithmic problem solving"--

Self Instructional Math 1995 The Self Instructional Math course book is designed to provide a basic math knowledge for those involved in the planning, design, and construction of highways. It was developed in a manner to allow the student to take the course with minimal supervision and at times that the work schedule allows. The first version of the course was developed in the early 1970's and due to its popularity was revised in the early 1990's to reflect changes in the highway construction math needs. The anticipated move to metric (System International) measurements by the highway industry has necessitated the need to change the math course problem values to metric units. The course includes the latest in Iowa DOT policy information relative to the selection and use of metric values for highway design, and construction. Each unit of the book contains instructional information, section quizzes and a comprehensive examination. All problem values are expressed in metric rather than dual (english and SI) units. The appendix contains useful conversion factors to assist the reader in making the change to metric.

Towards a Socially Just Mathematics

Curriculum Tony Cotton 2024-06-03 Drawing from many years of shared experiences in mathematics teaching and teacher education, the authors of *Towards a Socially Just Mathematics Curriculum* offer a pedagogical model that incorporates and introduces learners to new cultures, challenges stereotypes, uses mathematics to discuss and act for social justice, and develops a well-rounded and socially just pedagogy. Readers will be encouraged to reflect on their own teaching practice and to identify areas for development, creating a more inclusive and equal mathematics experience for all learners. Split into three distinct parts and filled with practical applications for the classroom, this essential book explores: Translating theory into practice by engaging in education for social justice; Applying this theory to teaching and learning across the Early Years, primary education and secondary education; and Reflecting on professional practice and identifying ways forward to continue providing an inclusive and equitable mathematics learning experience for all students. This is an essential read for those interested in providing an inclusive, socially just mathematics education for their learners, including teachers, teaching assistants, senior leaders and trainees within primary and secondary schools.
